ENGINE. POWER YOUR MUSIC.

Designed to meet your music preparation, performance and control needs, ENGINE is a unique combination of software and hardware that empowers today's DJs with high speed access and control over their extensive digital music libraries.

- Manage up to 100,000 files across multiple storage mediums with lightning fast search results
- Transfer files direct to SC3900 players from PC/Mac or storage device
- Connect up to four SC3900 players in a single ENGINE system

PREPARE

Running on PC or Mac, ENGINE software 'learns' your digital music collection and creates a performance-optimised database, including waveform data and BPMs. You can also use ENGINE to define HotCue and Loop points within all your tracks.

When it's time to perform, you can leave the music on your computer, or drag and drop the tracks you need for a set direct to a USB storage device for use with an ENGINE-enabled SC3900 player.

PERFORM

With your database setup, you can search it at lightning speed, whether you're using a PC/Mac or a storage device (USB memory stick, USB HDD) as your source.

SC3900 uses onboard ENGINE firmware to deliver high speed track search and loading. Up to four players can be linked together ensuring fast and accurate cueing of audio wherever it's needed in a multi-player setup

CONTROL

If you're using a PC/Mac in your live setup, ENGINE provides a complete graphic display for all players connected to the network, including showing the tracks currently on cue with each SC3900.

For performances without a computer, an iPad® loaded with the ENGINE app can be used (via an optional wireless router) for visual feedback and advanced remote control.

TYPICAL CONFIGURATIONS

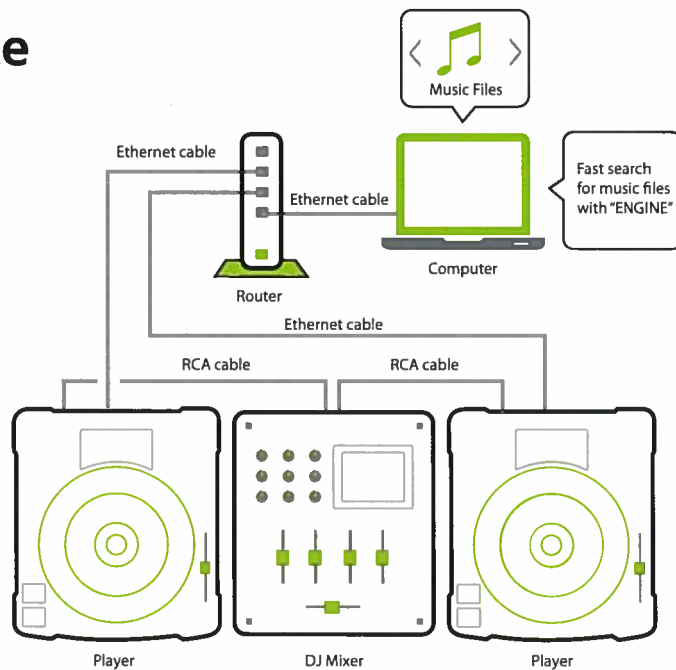

ENGINE liberates your digital music library, letting you find the tracks you need and control their playback effortlessly, whether you're performing using a PC/Mac or not. Up to four SC3900 players can be used in a single system.

Here are two basic setup configurations:

PC/Mac as music source

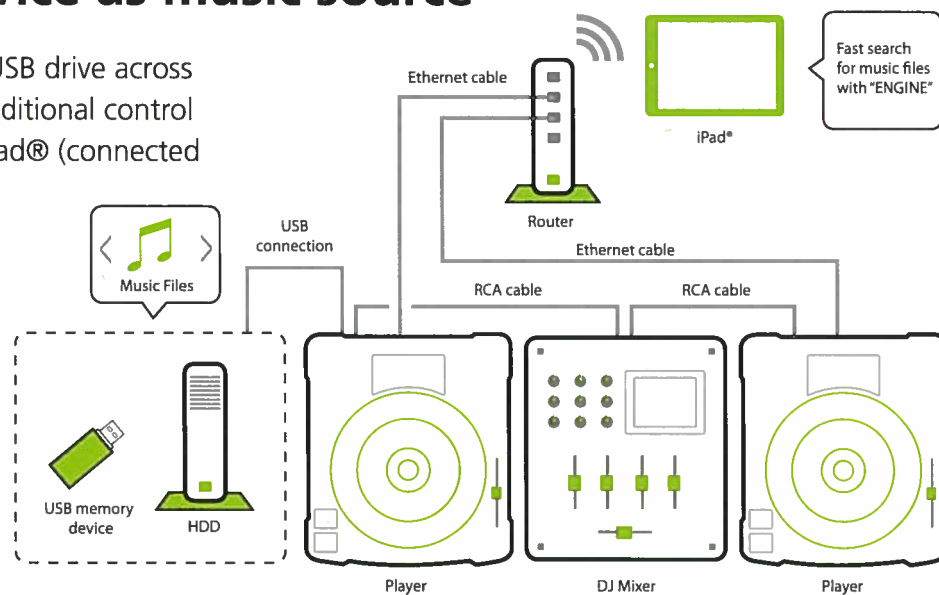

Connect up to four SC3900 via router to PC/Mac and stream audio files direct to each player.

Use the SC3900 to navigate files on the computer or 'fast search' using PC keyboard.

Storage device as music source

Share files from one USB drive across up to four players. Additional control via ENGINE app for iPad® (connected via wireless router).

ENGINE-ENABLED HARDWARE

The latest Denon DJ player features built-in ENGINE firmware, ready to integrate with your ENGINE system.

SC3900

- 9-inch Active Platter with High Torque Direct Drive Motor
- ENGINE software included
- Media Server for "ENGINE" software
- Player Link Network — File Share between Networked SC3900
- Playback Direct from USB / PC / CD
- Fully Mappable MIDI Controller
