

PROLYTE TRUSS SYSTEMS

© Prolyte Sales BV

#### Dedicated to all Prolyte users

Due to the growing diversity of our product range and the constant addition of new products, Prolyte feels it is more convenient for our users to present these products in separate brochures rather than in our previous all-encompassing catalogue. Doing so will also give Prolyte the opportunity to publish updates more frequently, which will guarantee you optimum and up-to-date information. Compiling new product information, gathering new technical information and updating it according to the latest insights and standards is a new challenge every time, but also a great pleasure.

We hope, again, to provide you with the basic essentials we believe our products should meet, in-depth product information and user-friendly solutions. Product safety and safe working practices can only be achieved by offering complete product information and knowledge.

Our starting point is the provision of a database which all Prolyte users can consult on a regular basis.

Our policy to deliver not only the best possible products but also to support you in the best possible way is an aim keenly felt and supported by the entire Prolyte team. We hope this updated and restructured information will go some way to fulfilling this aim. As ever, feedback on information or products is welcome. After all, listening to our users will help us to perform even better.

#### Extraction of aluminium

Aluminium is the most abundant metal on Earth. But despite this it is expensive, largely because of the amount of power consumed in the extraction process.

Aluminium ore is called bauxite. Bauxite is purified to yield a white powder, aluminium oxide, from which aluminium can be extracted. Extraction is done by electrolysis, but first the aluminium oxide must be made molten so that electricity can pass through it.

Aluminium oxide has a very high melting point (over 2000°C) and it would be expensive to melt it. Instead, it is therefore dissolved in molten cryolite, an aluminium compound with a lower melting point than aluminium oxide.

Prolyte Products. Performance in Aluminium.

# INTRODUCTION

## Providing the complete range

Offering our customers a complete range of trussing suitable for several types of applications and solutions is the main philosophy behind our product range.

Prolyte therefore has a broad range of trusses, from small, aesthetic trusses for shop fitting or exhibition use to large and robust truss types for more rugged installations or outdoor events. Prolyte is able to recommend a suitable truss type for each job. All Prolyte trusses are based on the same design principles: keep it simple, keep it standard, make life easier, be flexible and, last but not least, safety is paramount.

## Economic investment

Investing in Prolyte trusses is a sound investment for the future. Prolyte systems are designed for growth.

Starting with several pieces of truss you can expand your stock to ground supports, towers or even roof systems, still based on your first set of trusses.

Furthermore, Prolyte is able to give you thoroughly professional advice and support based on extensive insight

into your market, practical experience and customer feedback. Investing in truss systems that are most suited to your market demands and company's goals is as important as investing in solid and safe material. Prolyte trusses are renowned for their high quality and reliability.

## Safety first

When it comes to working with rigging or trussing materials, safe working practice and a comprehensive knowledge of materials are vital. Prolyte designs trusses that not only have a proven track record but are also based on the workmanship and experience of many technicians worldwide.

Their feedback, ideas and requirements are incorporated into the design of our trusses.

Providing you with current and accurate data on loading possibilities and material specifications is another step towards enhancing safe working practice. Your safety depends on the correct use and application of our trusses.

Prolyte therefore provides you with as much knowledge and data as possible. Why not attend one of our free seminars?

## Definition

A truss as used in the entertainment sector is a modular, spatial lattice structure, predominantly made of welded aluminium tubes. It is designed to build 2D or 3D structures and to support loads such as set props, lighting or sound equipment.

## Application

The use of trusses in the entertainment sector can be divided into two main categories:

- A truss system used as a construction element
- A truss construction used as lifting equipment

A truss system used as a construction element – that is, as a supporting structure for an exhibition stand or wall-mounted billboard frame – is, in most European countries, subject to local building codes and must be calculated in compliance with applicable standards such as DIN 4113, BS 8118 and Eurocode 9.

Prolyte trusses are calculated in compliance with DIN 4113 and Eurocode 9 standards. In accordance with regulations for building as compiled by DIBt, the German institute for building technology, trusses must bear the U-sign.

The U-sign is a part of European CE marking that applies to building materials only and constitutes a declaration on the part of the manufacturer that trusses and the materials from which they are made all meet the applicable requirements.

Trusses can also be used as a load-bearing element in combination with a lifting machine such as a winch or a hoist. This application differs from the first because, in most cases, it means that loads will be suspended above individuals or a broader public. Increased safety measures may therefore be needed.

Furthermore, trusses as used in the entertainment sector are subject to wear and tear through repetitive use and handling. Trusses are subject to the CWA 15902-2 which state that therefore an additional safety factor of 1,2 is required.

Truss structures are mainly used in the events market, which can be defined as, but not restricted to, all activities for leisure and sports, arts and cultural performances, amusement, or the presentation of products.

Examples of entertainment are:

- Product presentations
- Theatre shows, musicals and opera
- Concerts, festivals and fairgrounds
- Exhibitions and trade shows
- Celebrations and parties
- Conventions, demonstration meetings

## Would you like to know more?

Please visit [www.prolyte.com](http://www.prolyte.com) for more technical information on Prolyte truss systems, manuals and loading tables.

We provide more in-depth technical knowledge on roof and stage structures in the Prolyte Black Book "Technical Matters" (technical background information).

## APPLICATION SCOPE

<b>USE</b>	
AI-17	Health and safety requirements -lifting equipment / Netherlands
BGV C1 / GUV 6,15	Staging and Production Facilities for the Entertainment Industry / Germany
BS 7906-2	Code of practice for use of aluminium and steel trusses and towers / England
LOLER	Safe use of lifting equipment, lifting operations and lifting equipment regulations / England
NPR 8020-10	Entertainment-rigging-design factors of safety / Netherlands
TISE	The institution of Structural Engineers, Temporary Demountable structures, guidance on use, procurement and design / England
VPLT SR 1.0	Code of practice for event technology- Provision and Use of Truss Systems / Germany
<b>MANUFACTURING</b>	
ANSI E1.21	Temporary ground-supported overhead structures used to cover the stage and support equipment in the production of outdoor events
ANSI E1.2-2006	Entertainment Technology: Design, Manufacture and Use of Aluminium Trusses and Towers
CWA 15902-2	Lifting and Load-bearing Equipment for Stages and other Production Areas within the Entertainment Industry - Part 2: Specifications for design, manufacture and for use of aluminium and steel trusses and towers
BS 7905-2	Specification for design and manufacture of aluminium and steel trusses and towers
BS 8118	Structural use of Aluminium part 1 code of practice for design
DIN 1055 (all parts)	Design loads on buildings - all parts
DIN 18000-1	Steel structures; design and construction
DIN 4112	Temporary structures, fairground amusements, directives for dimensioning and construction
DIN 4113-All parts	Aluminium constructions under predominantly static loading; static analysis and structural design
EN 10002-1	Metallic materials – Tensile testing – Part 1: Method of testing at ambient temperature
EN 10067:1997	Hot rolled bulb flats, Dimensions and tolerances on shape, dimensions and mass
EN 13155	Cranes-safety-non-fixed load lifting attachments
EN 1990	Eurocode 0 Basis of structural design
EN 1991 all parts	Eurocode 1 Actions on structures
EN 1999 all parts	Eurocode 9 design of Aluminium structures
EN 30042:1994	Arc welded joints in aluminium and its weldable alloys - Guidance on quality levels for imperfections.
EN ISO 3834-1 & 3	Quality requirements for welding - Fusion welding of metallic materials – Part 1: Guidelines for selection and use Part 3: Standard quality requirements
EN 292-1	Safety of machinery - Basic concepts, general principles for design – Part 1: Basic terminology, methodology
EN 292-2	Safety of machinery - Basic concepts, general principles for design – Part 2: Technical principles and specifications
EN 754 (all parts)	Aluminium and aluminium alloys - Cold drawn rod/bar and tube
EN 755 (all parts)	Aluminium and aluminium alloys - Extruded rod/bar, tube and profiles
EN 515:1993	Aluminium and aluminium alloys - Wrought products - Temper designations
EN 573 (all parts)	Aluminium and aluminium alloys - Chemical composition and form of wrought products
EN 10204:2004	Metallic products - Types of inspection documents
PREN 1090-3	Execution of steel and aluminium structures-part 3 technical rules for execution of aluminium structures

### **DO**

- Clean, check and maintain your trusses on a regular basis, as this will improve ease of assembly
- Throw away damaged or deformed trusses, spigot pins or couplers
- Make a structural calculation for each construction you build
- Store and transport your trusses on proper dollies
- Use copper hammers for assembling, as this will reduce damage to the truss and pins
- Attach loads in node points
- Check how loads are attached to the truss before lifting

### **DON'T**

- Mix H and X version trusses in one construction
- Mix trusses of multiple suppliers in one construction
- Exceed the maximum loading of single spans as specified in the loading tables
- Exceed the given structural data of trusses
- Drill holes in truss tubes
- Use damaged trusses, couplers or spigot pins
- Climb on trusses while attaching yourself to a truss; most trusses are not designed to hold loads resulting from a free fall
- Attach loads to the truss diagonals

## DECORATIVE TRUSS

### System characteristics

The Prolyte Decorative truss consists of the E20 series. The E20 truss is available in triangular and square types. The E20 series is designed as a lightweight, light-duty truss system with a mainly decorative function. The small and highly aesthetic truss can be used for structural purposes as well. Compact construction, optimum strength and high-tech looks make this truss an appropriate decorative element with numerous applications.

### System applications

The E20 series truss offers a flexible and visually attractive solution for exhibition builders, shop fitters, and for architectural and interior design applications. It is primarily used for displays, exhibition booths or interior decoration. In these markets, the products must meet high demands. The product has to look neat and clean in its decorative function but, at the same time, has to be very flexible when part of a complex structure. E series trusses incorporate all of these characteristics – and more.

### Coupling system

The Prolyte Decorative truss, or E20 series, uses the CCS4 conical coupling system. CCS4 allows fast, efficient and reliable coupling of your trusses and corners.

## PROLYTE E20D / E20V TRUSS

Photo : Le Creuset GMBH, Germany  
Project : Messe Leipzig

The E20 truss is constructed of main tubes of 32 x 1,5 mm and diagonals of 10 x 1,0 mm, and uses the CCS4 coupling system. Prolyte supplies a variety of E20 truss elements that

provide maximum flexibility, like standard or custom-made lengths, circles and arches, and several types of corners. Prolyte can deliver custom-made pieces on request.

## MULTI PURPOSE TRUSS

© Prolyte Sales BV. Omke Oudeman

### System characteristics

The Prolyte Multi-Purpose truss consists of the X&H30 series and the H40 series. The X&H30 truss is available in ladder, triangular and square types, and the H40 truss is available in ladder, triangular and square types.

The X&H30 series and the H40 series are designed as lightweight, light to medium-duty truss systems that are used in the installation, rental and exhibition market. This truss is strong, compact and very versatile. The truss has a low selfweight. Assembly is foolproof due to the continuous webbing of the diagonals.

The X and H versions are distinguished by their different wall thickness. All X trusses have main chords of 2 mm thick; all H trusses have main chords of 3 mm thick. Although the two series are almost identical in appearance, their technical specifications and load capacity differ. The thicker walls of the H trusses makes them less vulnerable to transport-related damage and extends their durability. In general, X trusses are more suited for permanent or semi-permanent installations, whereas H trusses are much used in the rental market or for moving grids.

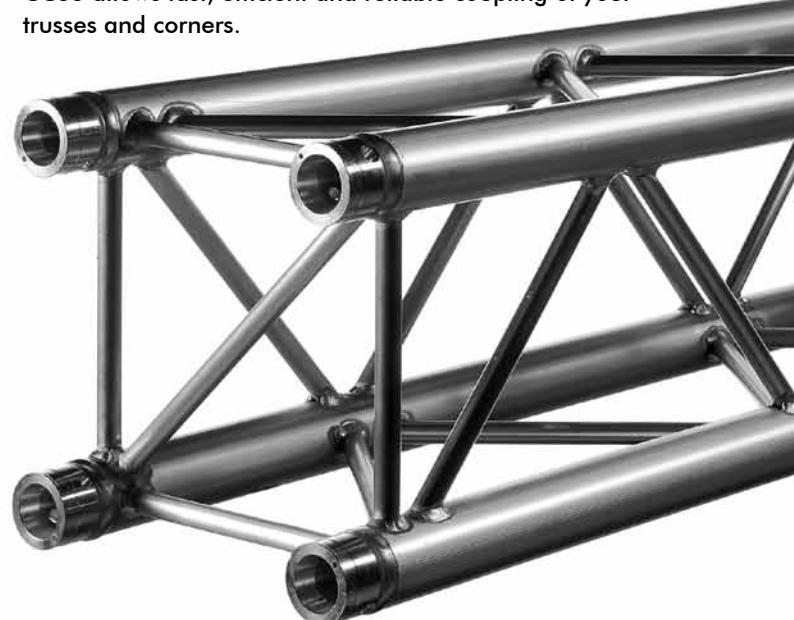

### System applications

The X&H30 series truss and the H40 series truss offer a versatility that makes them popular and much used in the exhibition as well as the rental market. The trusses are used in permanent or semi-permanent installations; for example, decorative and architectural set pieces, theatre sets, shop displays, studio grids, showrooms and so on.

Their strength in relation to their relatively small dimensions make them ideal for complex structures like displays or booths. The H trusses are primarily designed for high-frequency users like rental or exhibition companies, or for semi-permanent installations in demanding circumstances like moving lighting rigs in discotheques, stage scenery elements or touring exhibition stands.

### Coupling system

The Prolyte Multi-Purpose truss consisting of the X&H30 series and the H40 series uses the CCS6 conical coupling system. CCS6 allows fast, efficient and reliable coupling of your trusses and corners.

## PROLYTE X30L / X30D / X30V TRUSS

1 inch = 25,4 mm | 1m = 3,28 ft | 1 lbs = 0,453 kg

- Loading figures only valid for static loads and spans with two supporting points
- Spans must be supported at each end
- If dynamic loads or wind loads are involved, or more supporting points are applied, contact a structural engineer or Prolyte
- Loading figures are based on German DIN standards; to comply with BS 7905-2 / ANSI E1.2-2006 / CWA 15902-2, the loading data must be multiplied by 0.85
- The self-weight of the trusses has already been taken into account
- For spans longer than indicated and with a different loading set-up use the KYLo programme
- For structures contact Prolyte

Mark approval certificate No. 2238/04  
Test report No. 2237/04  
TÜV certification only valid for loading table above.

Loads must be suspended from bottom chord only.

# PROLYTE H30L / H30D / H30V TRUSS

Photo : Creativ-Design, Germany

The H30 truss is constructed of main tubes of 48,3 x 3 mm and diagonals of 16 x 2 mm, and uses the CCS6 coupling system.

Prolyte supplies a variety of H30 truss elements that provide maximum flexibility, like standard or custom-made lengths, circles and arches and several types of corners.

Prolyte can deliver custom-made pieces on request.

The number of recessed rings in the coupler receiver distinguishes the X and H series.

1 inch = 25,4 mm | 1m = 3,28 ft | 1 lbs = 0,453 kg

- Loading figures only valid for static loads and spans with two supporting points
- Spans must be supported at each end
- If dynamic loads or wind loads are involved, or more supporting points are applied, contact a structural engineer or Prolyte
- Loading figures are based on German DIN standards; to comply with BS 7905-2 / ANSI E1.2-2006 / CWA 15902-2, the loading data must be multiplied by 0.85
- The self-weight of the trusses has already been taken into account
- For spans longer than indicated and with a different loading set-up use the KYLo programme
- For structures contact Prolyte

Mark approval certificate No. 2256/04  
Test report No. 2255/04  
TÜV certification only valid for loading table above.

## PROLYTE H40D / H40V TRUSS

Photo : Prolyte Sales BV  
Project : Media Centrale, Groningen, H40 truss

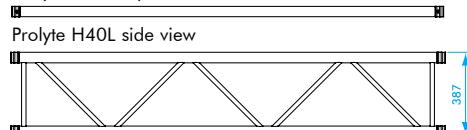

The H40 truss is constructed of main tubes of 48,3 x 3 mm and diagonals of 20 x 2 mm, and uses the CCS6 coupling system. Prolyte supplies a variety of H40 truss elements that

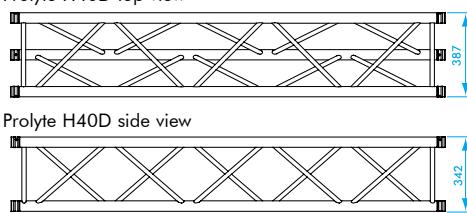

provide maximum flexibility, like standard or custom-made lengths, circles and arches and several types of corners. Prolyte can deliver custom-made pieces on request.

## HEAVY DUTY TRUSS

### System characteristics

The Prolyte Heavy-Duty truss consists of the S and B series, ranging from the S36 to the B100 truss, all available in several types. The S and B series are designed as robust truss systems; they have thick-walled chords, heavy-duty bracing and an exceptionally strong coupler system.

The main characteristics of the Heavy-Duty truss are a relative compactness and ultimate strength, while a user-friendly design, durability and unrivalled loading capacities make this truss type a flexible and reliable choice for many events.

### System applications

The Heavy-Duty trusses are the ultimate solution for structures that have to meet high load-bearing demands and are subjected to high-frequency use, such as functioning as a supporting structure or overhead rig for more complex constructions. Their robust features make them suitable for outdoor use as well as indoor applications.

The S and B series are mainly used in the rental, stage-building, event and exhibition markets.

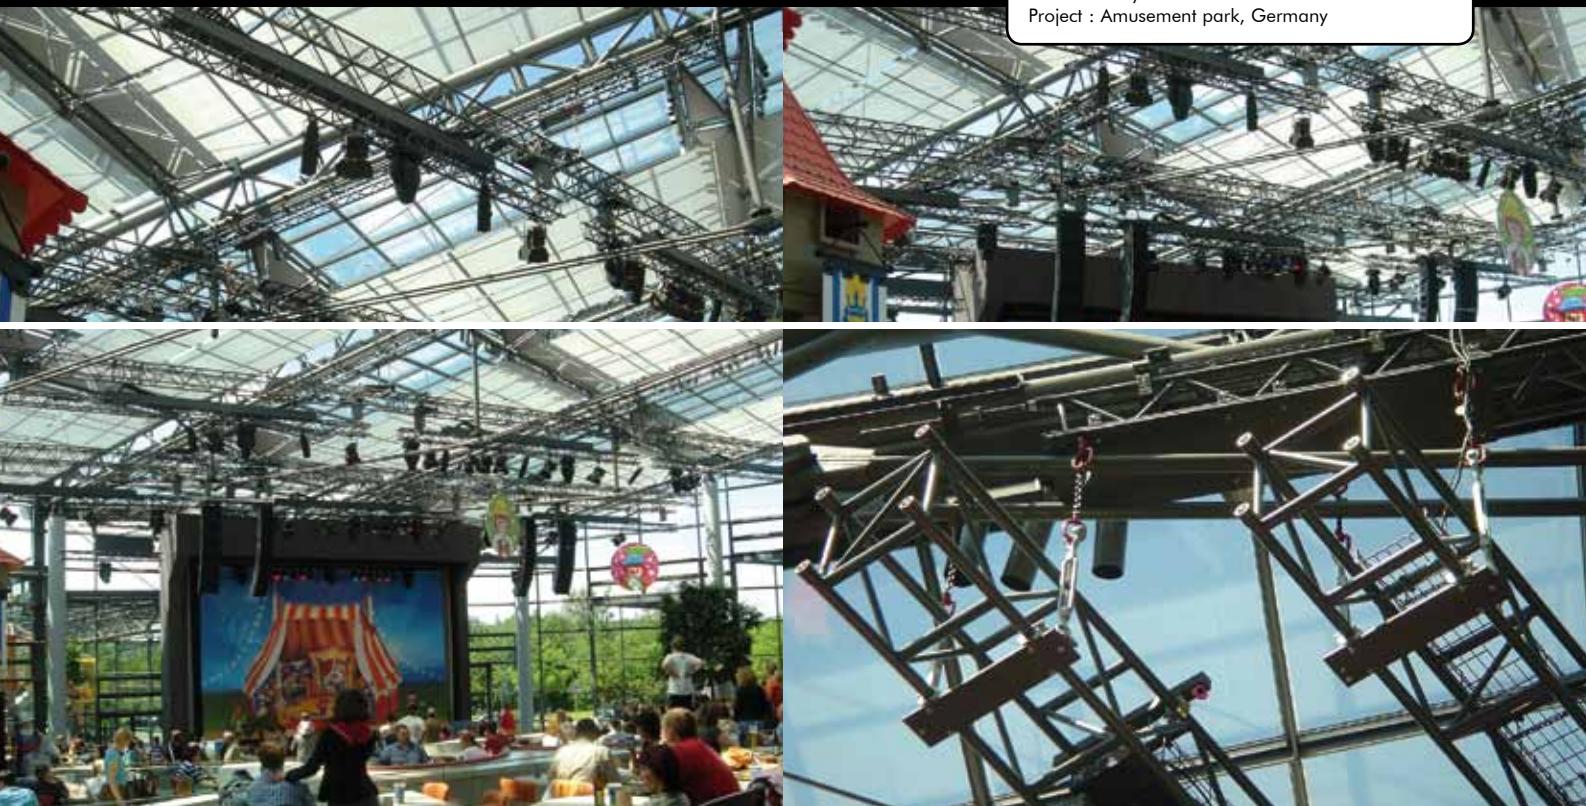

### Coupling system

Prolyte Heavy-Duty trusses, or S and B series, use the CCS7 conical coupling system. The CCS7 allows fast, efficient and reliable coupling of your trusses and corners.

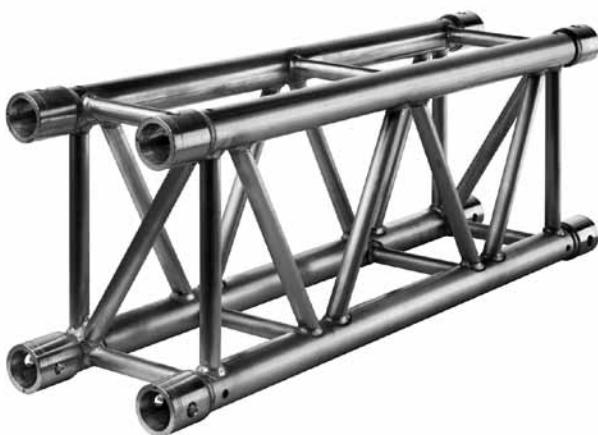

## PROLYTE S36R / S36V TRUSS

Photo : Prolyte Sales BV  
Project : Amusement park, Germany

The S36 truss is constructed of main tubes of 50 x 4 mm and diagonals of 25 x 3 mm, and uses the CCS7 coupling system. Prolyte supplies a variety of S36 truss elements that provide maximum flexibility, like standard or custom-made lengths, circles and arches and several types of corners. Prolyte can deliver custom-made pieces on request.

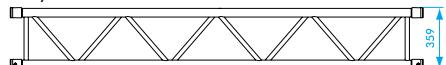

The S36V has 4-sided diagonal webbing and can therefore handle vertical as well as horizontal loads. The S36R can only handle vertical loading. Thanks to the clever spigot pin orientation in the couplers, assembly of the truss is foolproof.

## PROLYTE S52F / S52V / S52SV TRUSS

Photo : AED Rent, Belgium  
Project : Party tent

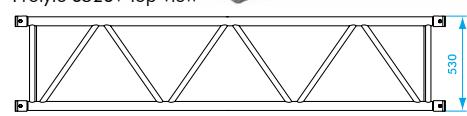

The S52 truss is constructed of main tubes of 50 x 4 mm and diagonals of 25 x 3 mm (S52F) or 30 x 3mm (S52V and SV), and uses the CCS7 coupling system. Prolyte supplies a variety of S52 truss elements that provide maximum flexibility, like standard or custom-made lengths, circles and arches and several types of corners. Prolyte can deliver custom-made pieces on request. For obvious reasons, the S52F is not available in curved sections.

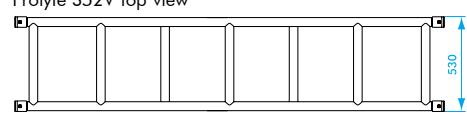

The S52SV has 4-sided diagonal webbing and can therefore handle vertical as well as horizontal loads. The S52V/S52F can only handle vertical loading. The S52F folding truss can save up to 70-80% of warehouse and truck space, while the smart placing of the hinges prevents personal injuries. Thanks to the clever spigot pin orientation in the couplers, assembly of the truss is foolproof.

1 inch = 25,4 mm | 1m = 3.28 ft | 1 lbs = 0,453 kg

- Loading figures only valid for static loads and spans with two supporting points
- Spans must be supported at each end
- If dynamic loads or wind loads are involved, or more supporting points are applied, contact a structural engineer or Prolyte
- Loading figures are based on German DIN standards; to comply with BS 7905-2 / ANSI E1.2-2006 / CWA 15902-2, the loading data must be multiplied by 0.85
- The self-weight of the trusses has already been taken into account
- For spans longer than indicated and with a different loading set-up use the KYLo programme
- For structures contact Prolyte

Mark approval certificate No. 860/96  
Test report No. 859/96

\*on • indicate F for Folding, V for Square and SV for Square truss with 4-sided webbing. Example: S52V-L200

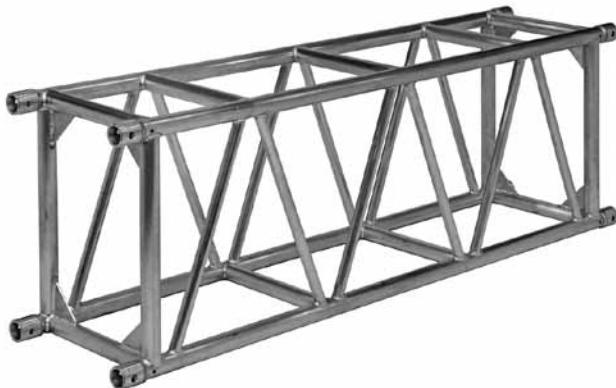

## PROLYTE S66R / S66V TRUSS

Photo : Italstage, Italy

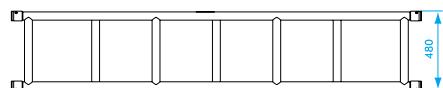

The S66 truss is constructed of main tubes of 50 x 4 mm and diagonals of 30 x 3 mm, and uses the CCS7 coupling system. Both the S66R and S66V have two-sided webbing and are capable of absorbing vertical loads only.

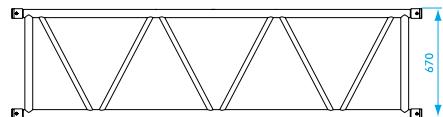

Prolyte supplies a variety of S66 truss elements that provide maximum flexibility, like standard or custom-made lengths, circles and arches and several types of corners. Prolyte can deliver custom-made pieces on request.

## PROLYTE S66R / S66V PRE RIGGED TRUSS

Photo : Qatar Vision, Qatar

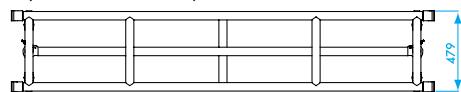

The Prolyte S66R and V trusses can be supplied with a robust drop-down system to enable the fitting of either a 4-bar, 6-bar or 8-bar with PAR 64 cans or other lighting fixtures.

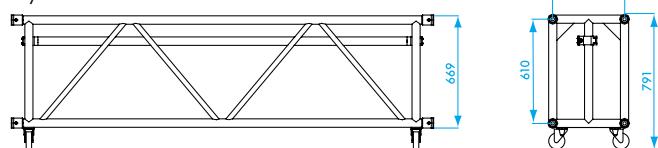

This integrated drop-down system converts the S66 truss into a so-called pre-rigged truss. The S66 truss can be delivered with a set of castor wheels to facilitate handling and transportation.

1 inch = 25,4 mm | 1m = 3.28 ft | 1 lbs = 0,453 kg

- Loading figures only valid for static loads and spans with two supporting points
- Spans must be supported at each end
- If dynamic loads or wind loads are involved, or more supporting points are applied, contact a structural engineer or Prolyte
- Loading figures are based on German DIN standards; to comply with BS 7905-2 / ANSI E1.2-2006 / CWA 15902-2, the loading data must be multiplied by 0.85
- The self-weight of the trusses has already been taken into account
- For spans longer than indicated and with a different loading set-up use the KYLO programme
- For structures contact Prolyte

## PROLYTE S100F TRUSS

Photo : AED RENT, Belgium  
 Project : Fashion show

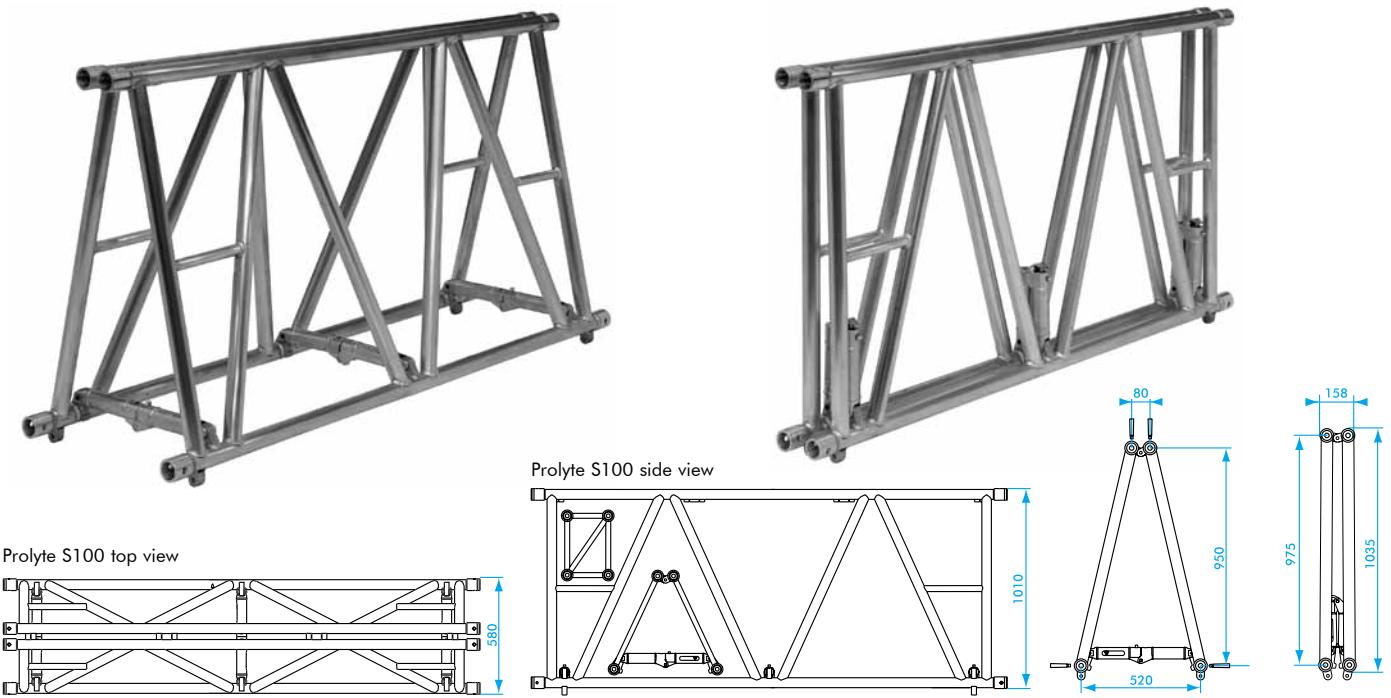

The S100F truss is constructed of main tubes of 50 x 4 mm and diagonals of 48 x 3 mm, and uses the CCS7 coupling system. Prolyte supplies a variety of S100 truss elements that provide maximum flexibility, like standard or custom-made lengths and several types of corners. Prolyte can deliver custom-made pieces on request. For obvious reasons, the S100F is not available in curved sections. Increased truss height and larger diagonals make it possible to create spans of up to 30 metres. This truss is suited for vertical loading only.

The geometry of the bracing makes it possible to combine the S100F truss with the S52F or S36R truss.

Extra horizontal braces are welded between the diagonals to make it possible for technicians to climb the truss.

The S100F folding truss can save up to 70-80% of warehouse and truck space, while the smart placing of the hinges prevents personal injuries. Thanks to the clever spigot pin orientation in the couplers, assembly of the truss is foolproof.

## PROLYTE B100RV

Photo : ModifiC, Russian federation  
Project : Armenian festival

The B100RV truss is constructed of main tubes of 60 x 6 mm and diagonals of 48 x 3 mm, and uses the CCS7 coupling system. Prolyte supplies a variety of B100 truss elements that provide maximum flexibility, like standard or custom-made lengths, circles and arches and some corners.

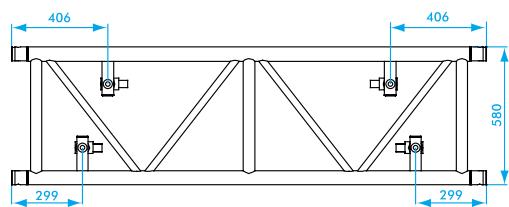

Prolyte can deliver custom-made pieces on request.

The B100 truss is easily accessible for technicians, making it more safe to climb. Due to the 4-sided webbing of the B100 truss, it can absorb vertical as well as horizontal loads, which makes it ideal for outdoor use or 3-dimensional structures. The B100RV truss is equipped with a set of castors as standard.

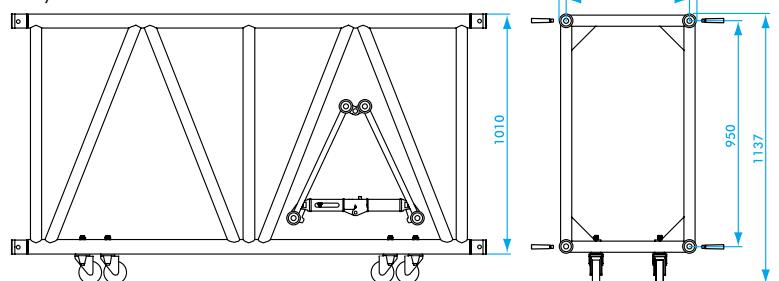

These castors are positioned on the inside of the main chords to allow for easy stacking of the truss for transportation purposes. Thanks to the clever spigot pin orientation in the couplers, assembly of the truss is foolproof.

## PROLYTE CATWALK TRUSS

Photo : Jan Hoefnagel, Flashlight Rental BV, The Netherlands  
Project : Blue Man Group

The design of the Prolyte catwalk truss (B100RV-CW) is based on the B100V truss. It can be used to create mother grids or working platforms as well as proscenium or lighting bridges in a theatrical environment. The B100RV-CW truss is fitted with an extra handrail on top and a reinforced plate on the bottom side to create a walking platform.

The catwalk truss can be flown by assembling bracing bars with fixed lifting eyes to the bottom braces of the truss.

The catwalk truss is designed and manufactured in compliance with:

DIN 1055, DIN 18800, DIN 4112, DIN 4112/A1,  
DIN 4113-1, DIN 4113-1/A1, DIN 4113-2.

Allowable loading table on page 41

## PROLYTE MAMMOTH TRUSS

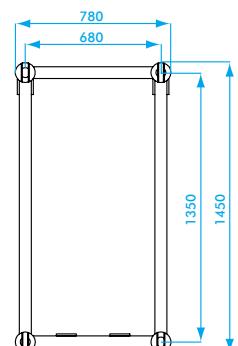

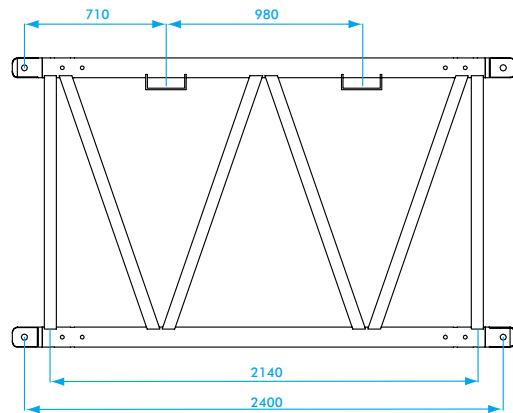

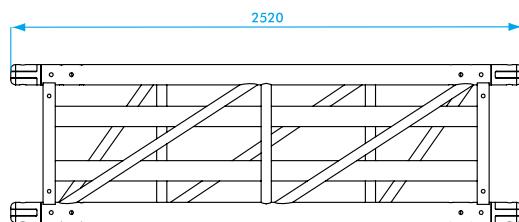

### Big, Bigger, Biggest?

The Prolyte M145RV Mammoth truss is one of the biggest trusses ever constructed from aluminium.

The final design of this truss not only reflects the Prolyte philosophy of making user-friendly products, it also proves the unrivalled technological knowledge and experience Prolyte has gained over the years.

### Practise translated into design

The basic requirements for this truss are massive strength and application possibilities within a construction, like a roof system or mother grid. With its massive strength the M145RV Mammoth truss is 5 times stronger than the B100 truss, on a stretch of 30 m. you still can apply a point load of 6400kg. The truss has no internal diagonals, other trusses can be stored within the M145RV. The overall measurements are thus designed that container and truck space are efficiently used. Pick up points for forklift handling are integrated.

## CIRCULAR TRUSS

Photo: AED Rent, Belgium

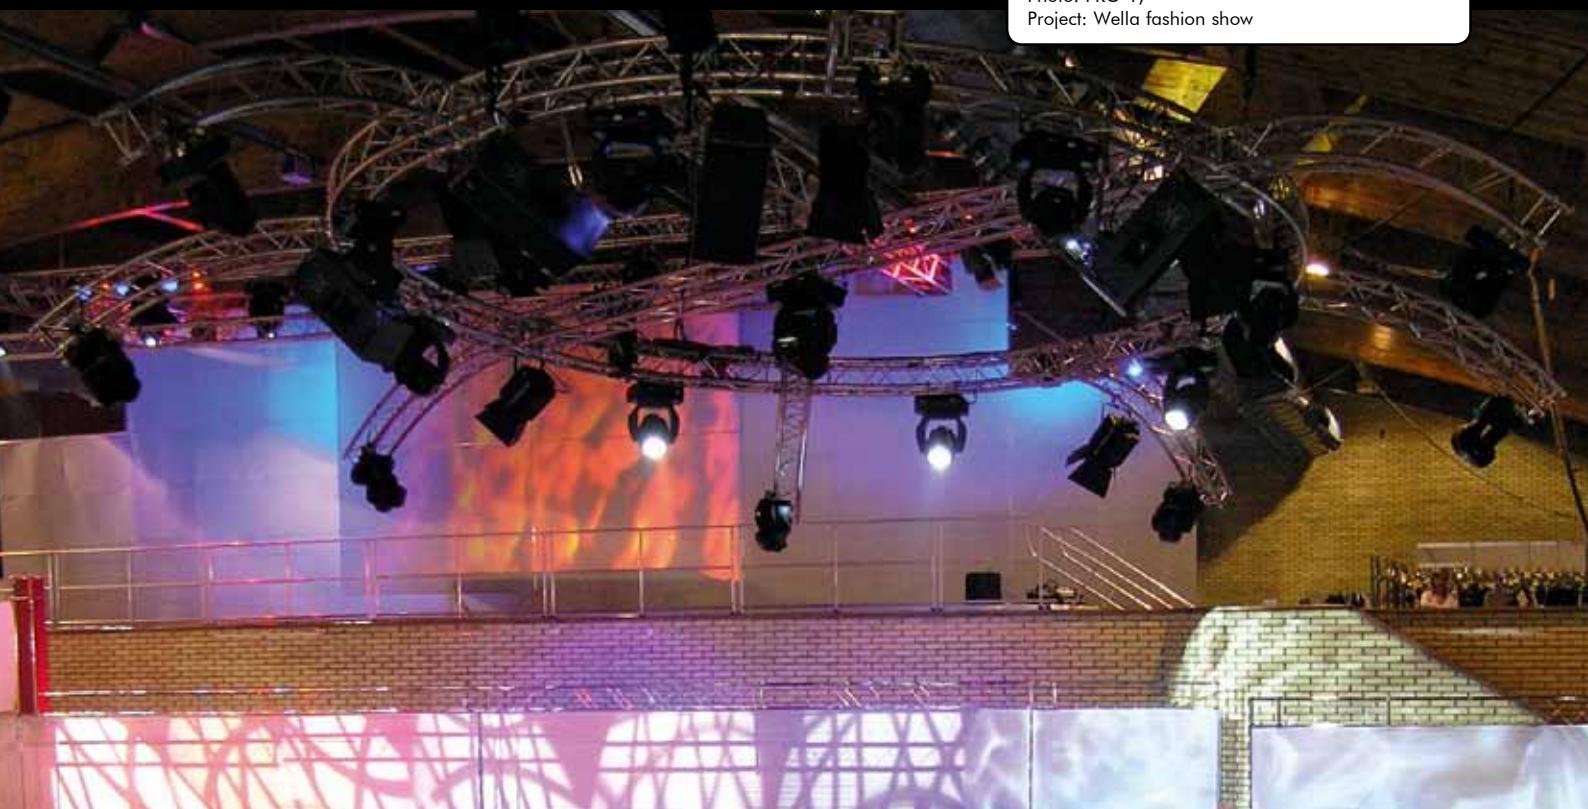

In addition to straight lengths, Prolyte manufactures circular trusses, curved trusses and arcs. These arched trusses are manufactured with a high degree of accuracy, ensuring a perfect fit without distortion.

Thanks to production by means of semi-automated welding jigs, all parts produced are identical. This guarantees that every segment of a circle can be mounted at any position or be replaced by a new part without affecting the integrity or overall shape of the circle.

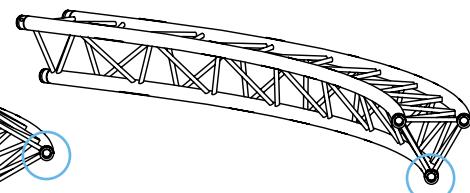

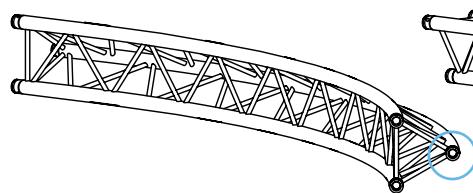

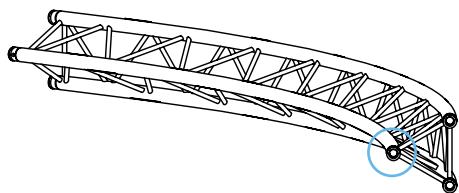

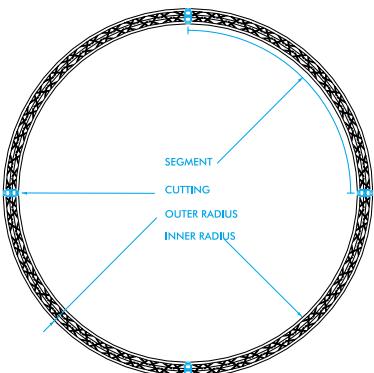

## PROLYTE CIRCULAR TRUSS

Photo: PRO 1,  
Project: Wella fashion show

Circular or curved trusses are manufactured in different diameters or degrees. When ordering a complete circular truss, the amount of cuttings required (each segment requires one cut) must be indicated. Couplers do not have to be ordered separately, as they are included in the amount of cuttings ordered.

A "cutting" divides the circle into segments. Individual segments cannot be longer than 5 metres. Prolyte recommends segment lengths of between 3-4 metres. For further details in this regard, please refer to the Black Book "Technical Matters".

All loading figures are based on Uniformly Divided Suspension Points and a suspended load in each of the fields. In all other cases, this loading data is NOT valid. If loads are unevenly divided, instability will occur. For more details and loading figures of other diameters, please visit our website.

- The absence of diagonal braces at the top and/or bottom side of the truss means a dramatic reduction in the allowable loading; a structural report per situation is required for these models
- Loading figures are based on German DIN standards; to comply with BS 7905-2 / ANSI E1.2-2006 / CWA 15902-2, the loading data must be multiplied by 0.85

All loading figures are based on Uniformly Divided Suspension Points and a suspended load in each of the fields. In all other cases, this loading data is NOT valid. If loads are unevenly divided, instability will occur. For more details and loading figures of other diameters, please visit our website.

- The absence of diagonal braces at the top and/or bottom side of the truss means a dramatic reduction in the allowable loading; a structural report per situation is required for these models
- Loading figures are based on German DIN standards; to comply with BS 7905-2 / ANSI E1.2-2006 / CWA 15902-2, the loading data must be multiplied by 0.85

All loading figures are based on Uniformly Divided Suspension Points and a suspended load in each of the fields. In all other cases, this loading data is NOT valid. If loads are unevenly divided, instability will occur. For more details and loading figures of other diameters, please visit our website.

- The absence of diagonal braces at the top and/or bottom side of the truss means a dramatic reduction in the allowable loading; a structural report per situation is required for these models
- Loading figures are based on German DIN standards; to comply with BS 7905-2 / ANSI E1.2-2006 / CWA 15902-2, the loading data must be multiplied by 0.85

## CANTILEVER LOAD

Photo: Event Structures, UK

Cantilever loads are a common phenomenon in daily practice. It is sometimes hard to predict what will actually happen with regard to loading and the resulting forces in a cantilever span.

As an additional service, we have therefore compiled the loading tables for cantilever loads for all our truss types. With the help of these tables, you will be able to apply cantilever loads in a safe and secure way.

Please be sure to read and understand these loading tables before bringing such loads into effect.

## CANTILEVER LOAD

CANTILEVER LOAD E20D

6,0	591	126

### LOADING

single load ballast at point A  $(P \times l_k / l_1) \times 1,5$

distributed load over length  $l_1$   $\left(\frac{Q \times l_k}{2 \times l_1}\right) \times 1,5$

$P = \text{kg or N}$   
 $l = \text{mm or m}$   
 $Q = \text{total UDL}$

Point A should have enough ballast weight to avoid the risk of uplifting caused by the cantilever weight  $P/q$ .

Loading figures only valid for static loads and spans with two supporting points.

## CORNERS

Photo: RSL, The Netherlands

The Prolyte truss series are complemented by a broad range of standard corners, box corners and book corners. Combining corners with straight or curved trusses makes it possible to construct an endless variety of configurations in terms of structure or grid.

### Standard corners

The standard corner range provides 2 to 6-way corners at several angles, from 45 to 135 degrees.

In addition, Prolyte manufactures a series of specially designed corners, such as the pyramid corner or swivel corners. For more information on these or on special, custom-made corners, please contact Prolyte's Customer Services.

### Box corners

The box corner system\* is a revolutionary corner system invented by Prolyte.

A 6-way cube is combined with specially constructed tubes by means of an internal screw thread and hexagon socket bolts. One Prolyte box corner can be converted into a 2 to 6-way corner as desired simply by mounting the female or male receivers to the corner. The flexibility and fixed dimensions of the box corner makes it a cost-efficient investment.

Box corners are capable of taking 100% of the applied load in a vertical or horizontal direction. This makes the box corner a fully fledged construction element, unlike traditional types of corners.

\* The box corner system is patented by Prolyte.

### Book corners

The Prolyte book corner is designed to be a flexible-angle corner. Angles ranging from 0 to 180 degrees can be made with just one corner. The attachments are bolted to the corner, using male or female receivers. The required angle is set with the additional fixation set. The book corner is not designed as a load-bearing element and therefore cannot be part of a structural component. Support the book corner on both sides of the hinge.

## FITTINGS

© Prolyte Sales BV. Omke Oudeman

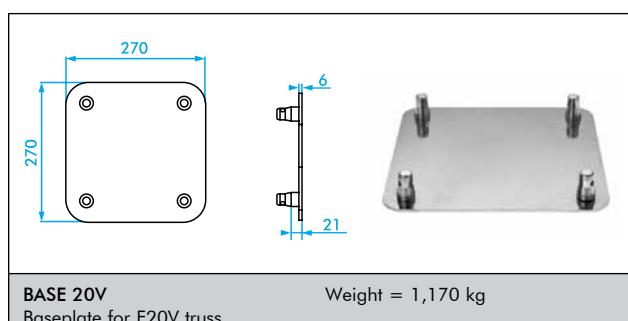

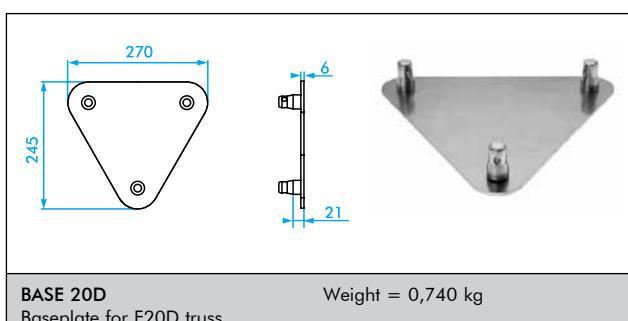

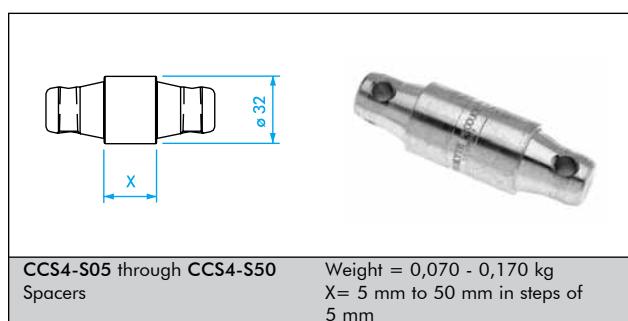

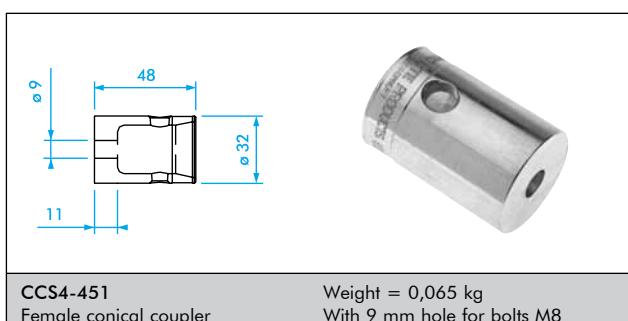

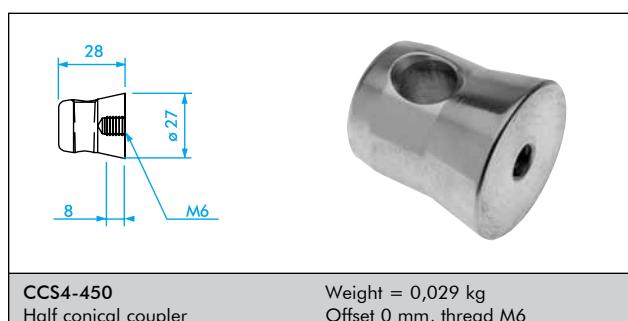

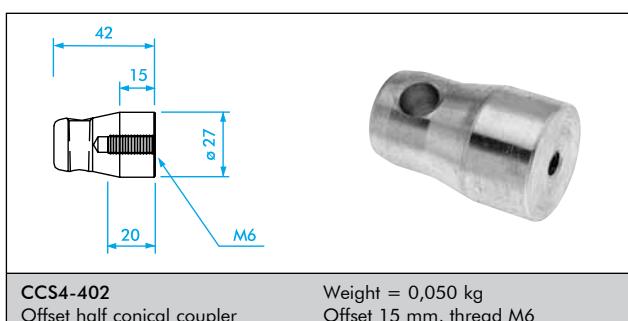

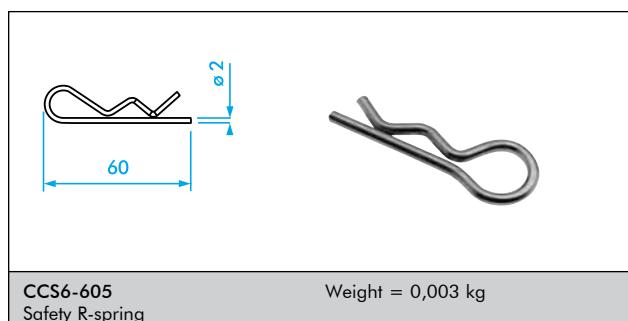

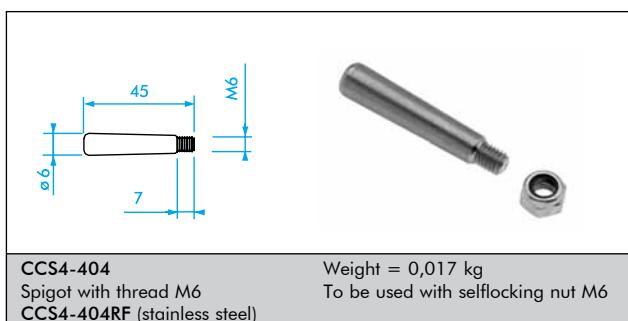

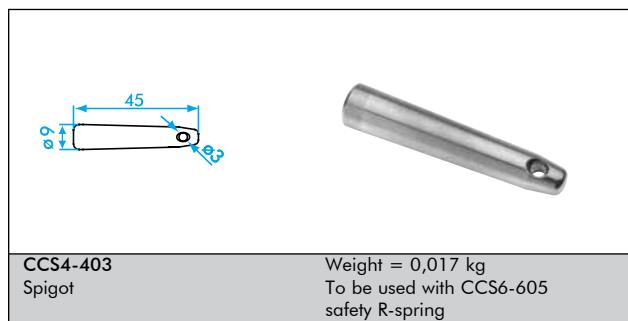

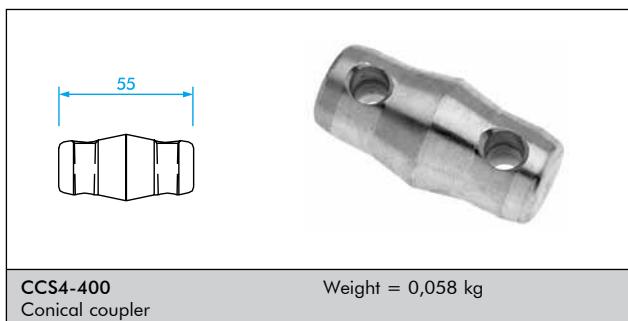

When Prolyte designed the original Conical Coupling System (CCS®), it constituted a huge step forward in the development of truss systems. Even today, the now much-copied Conical Coupling System is unrivalled in efficiency, strength and ease of assembly.

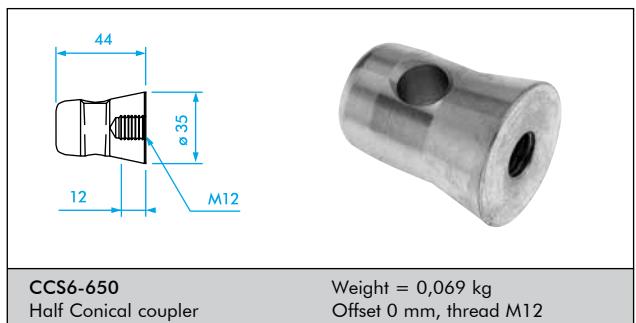

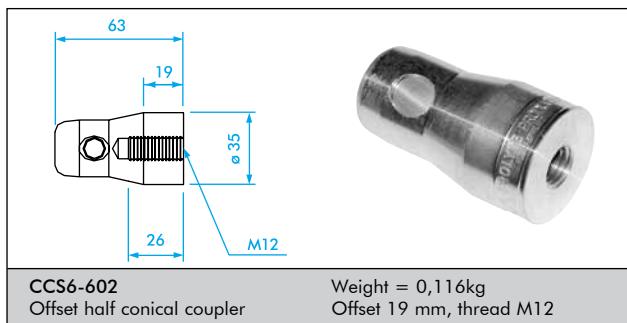

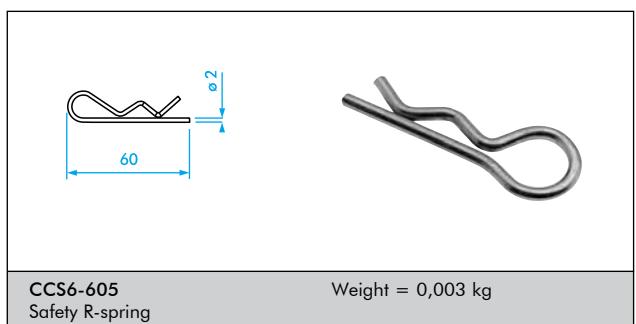

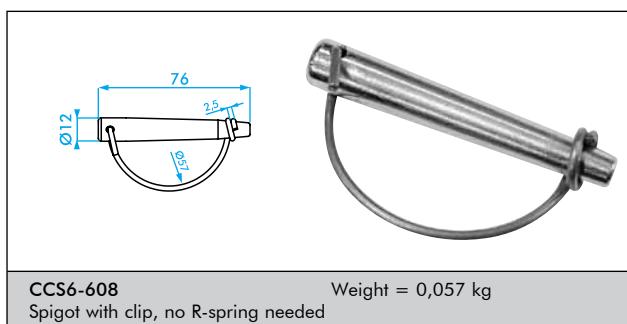

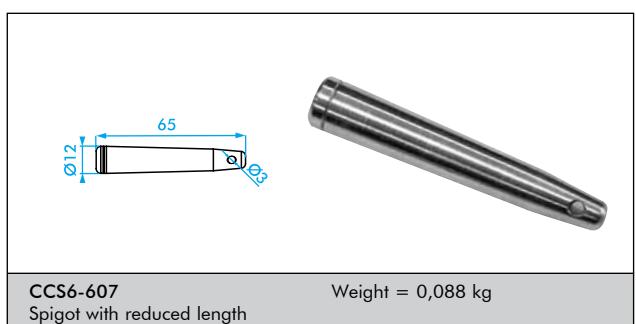

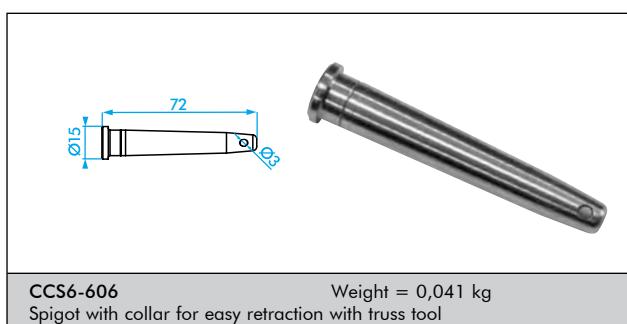

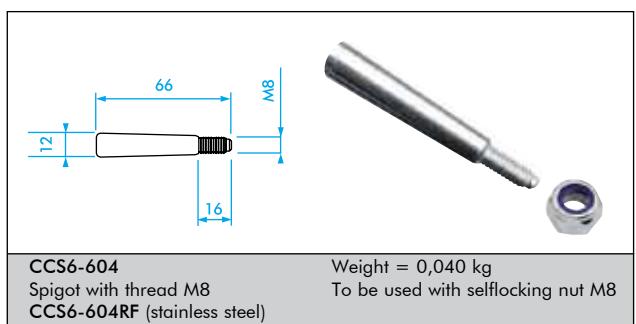

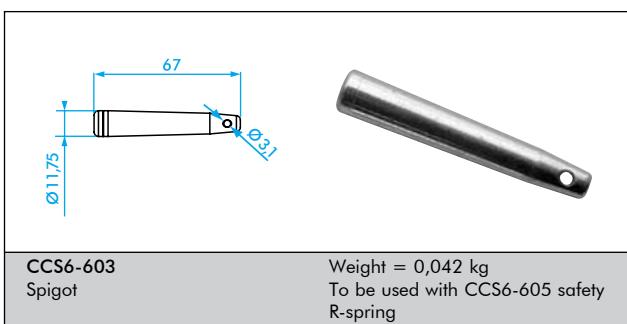

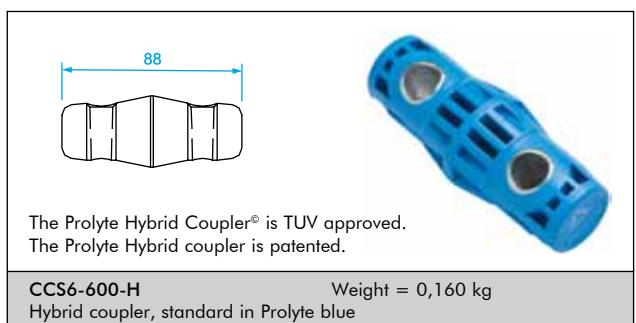

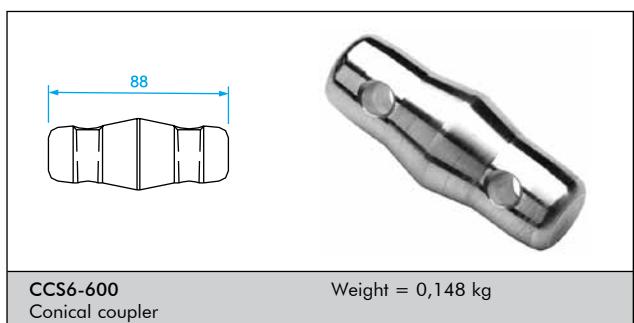

The innovative Conical Coupling System has many advantages over other types of connection systems and has gained a worldwide reputation for excellence and efficiency. The Conical Coupling System is available for all Prolyte truss systems and is deliverable in 3 sizes: CCS4, CCS6 and CCS7. A variety of specials is also available.

The Conical Coupling System makes the assembly of your truss system safe, fast and easy. The connection is rigid and strong.

## ACCESSORIES

Photo: Rombouts Showequipment BV, The Netherlands

Prolyte Accessories are a range of additional products that can be used in combination with a Prolyte truss series or other complementary products. This brochure presents a selection of accessories that might be helpful in the assembly or setting up of your truss constructions.

We hope that these products can facilitate your work.

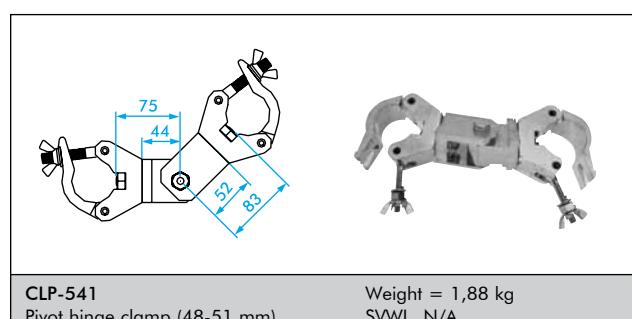

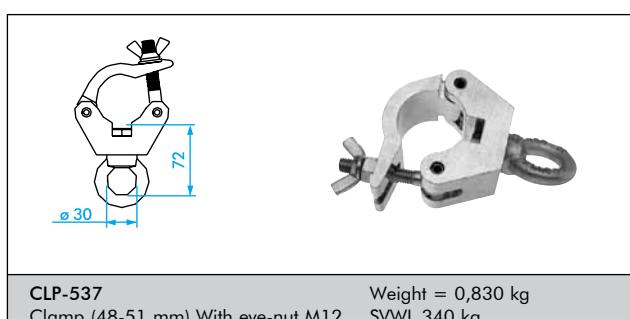

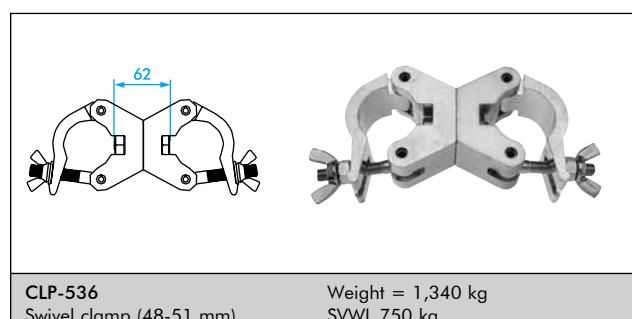

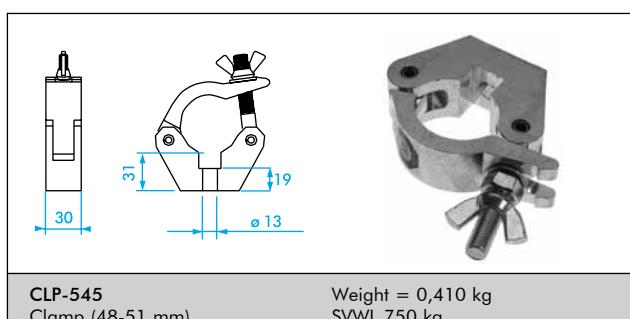

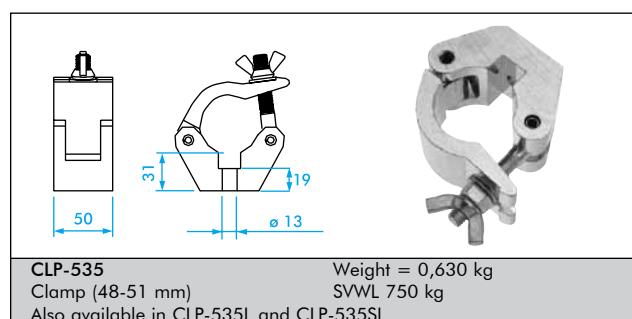

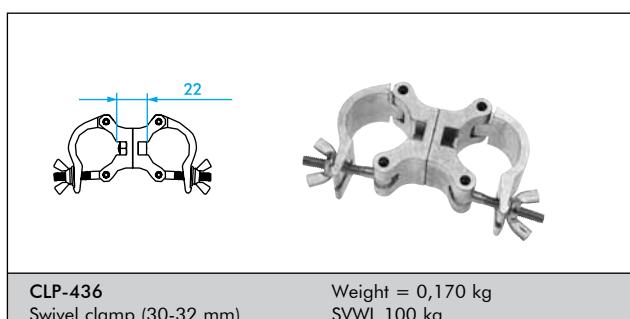

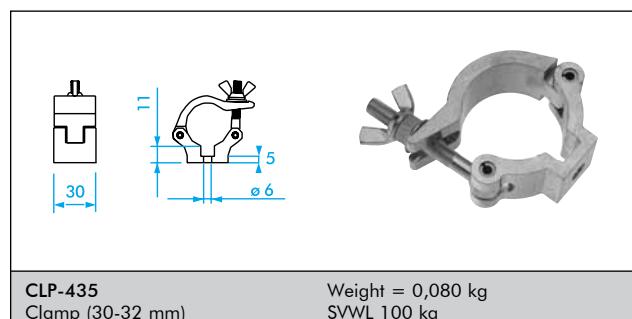

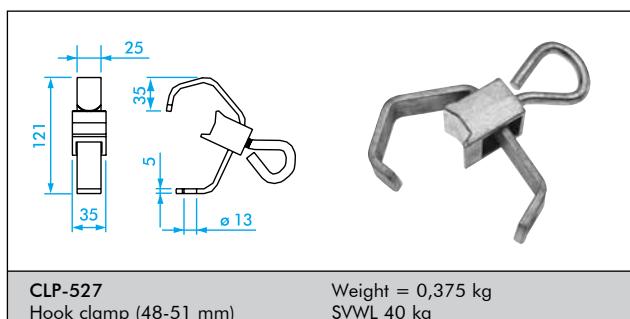

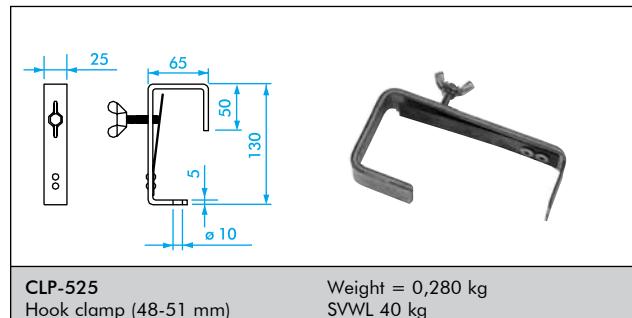

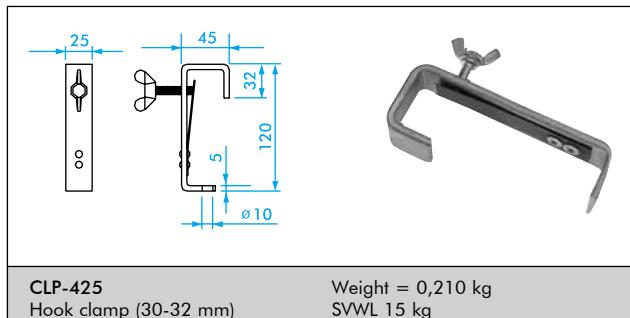

These different products have one thing in common: they have been developed to enable better use to be made of all the possibilities that your Prolyte truss system offers.

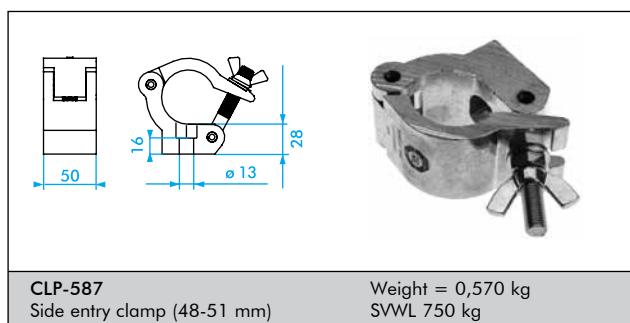

All Prolyte accessories are designed and manufactured according to the highest possible standards, regulations and, where applicable, TUV approvals.

Prolyte accessories are divided into four categories: clamps, followspot chairs, exhibition products and rigging hardware.

# CLAMPS

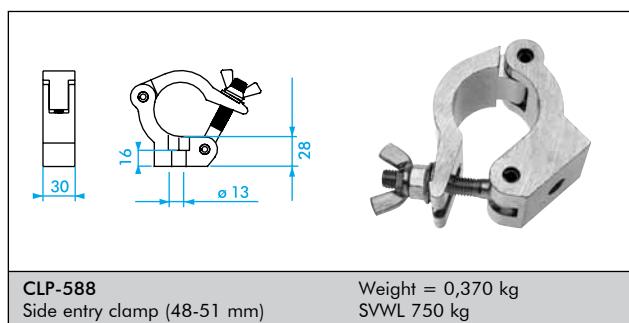

SVWL = Safe Vertical Working Load

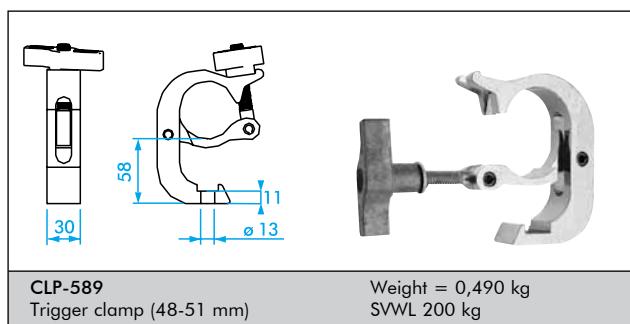

**CLP-587**  
Side entry clamp (48-51 mm)

Weight = 0,570 kg  
SVWL 750 kg

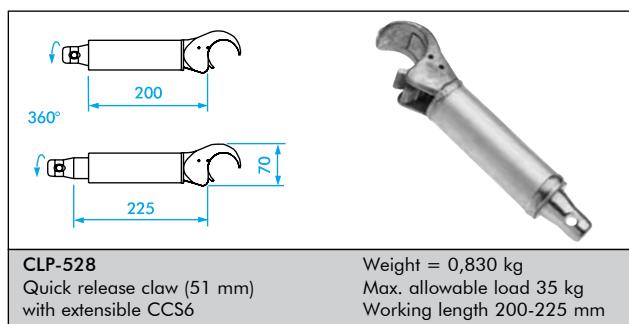

**CLP-588**  
Side entry clamp (48-51 mm)

Weight = 0,370 kg  
SVWL 750 kg

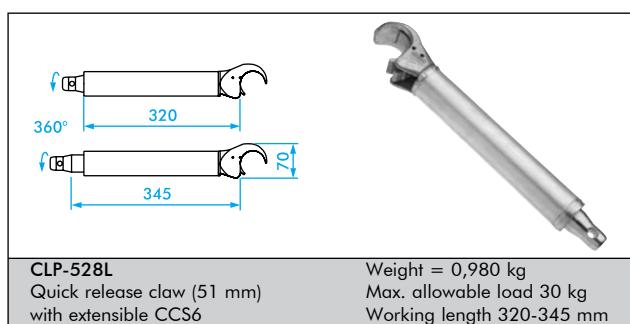

**CLP-589**  
Trigger clamp (48-51 mm)

Weight = 0,490 kg  
SVWL 200 kg

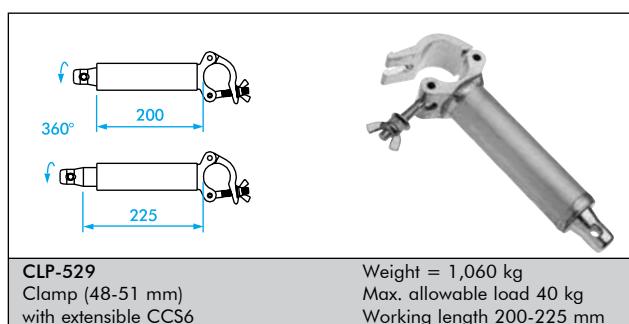

**CLP-528**  
Quick release claw (51 mm)  
with extensible CCS6

Weight = 0,830 kg  
Max. allowable load 35 kg  
Working length 200-225 mm

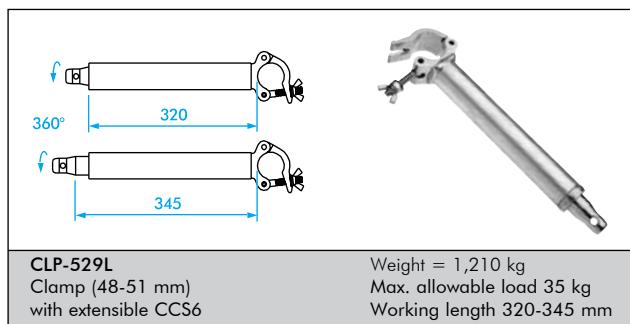

**CLP-528L**  
Quick release claw (51 mm)  
with extensible CCS6

Weight = 0,980 kg  
Max. allowable load 30 kg  
Working length 320-345 mm

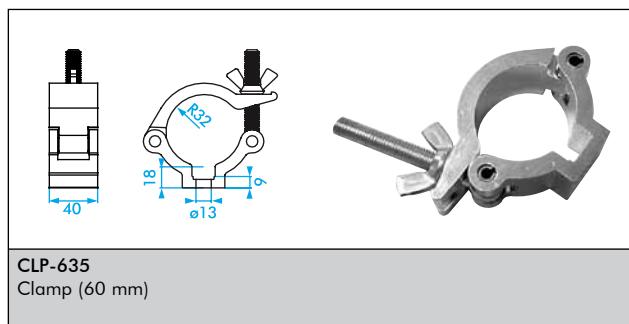

**CLP-529**  
Clamp (48-51 mm)  
with extensible CCS6

Weight = 1,060 kg  
Max. allowable load 40 kg  
Working length 200-225 mm

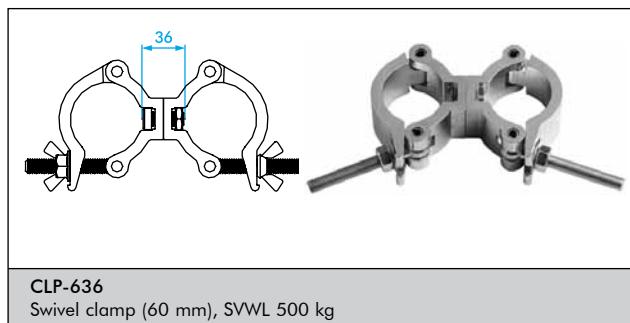

**CLP-529L**  
Clamp (48-51 mm)  
with extensible CCS6

Weight = 1,210 kg  
Max. allowable load 35 kg  
Working length 320-345 mm

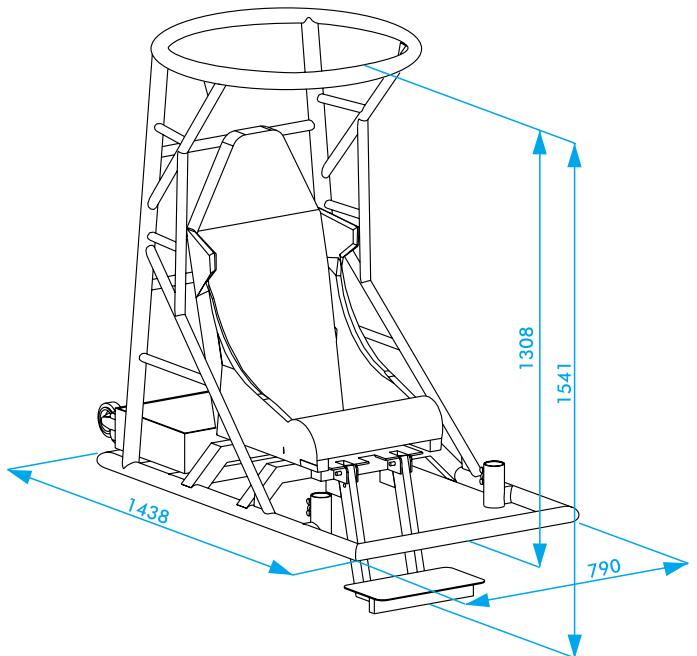

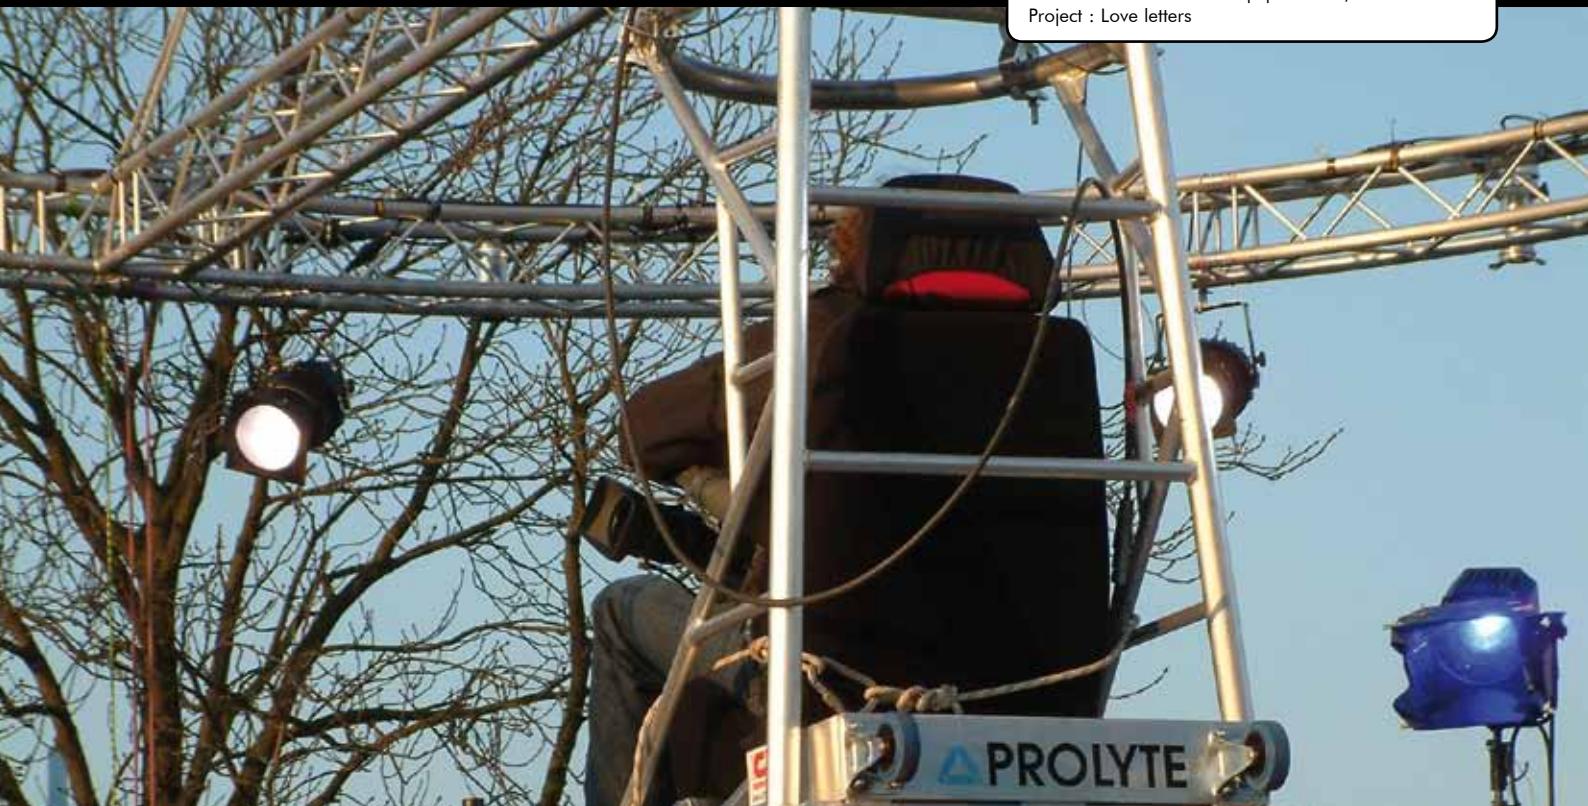

**CLP-635**  
Clamp (60 mm)

**CLP-636**

ACC-FFS-1

Followspot chair

**ACC-521**  
Truss Dolly

**ACC-515**  
Truss carrier for 30 series truss

**ACC-525**  
Truss carrier for 30D Truss

**ACC-520**  
Truss Butler

### Truss Butler®

The Truss Butler® is an ideal aid for the transportation and assembly of truss. You can assemble and wire your truss at an ideal working height.

### No more lifting

After having transported your truss with the butlers, you can further use them for the assembly of your truss. Simply put your truss on top of a Truss butler® to connect the truss.

Each next segment will be attached while the butler is moved easily along underneath the truss.

### Truss Butler® specifications:

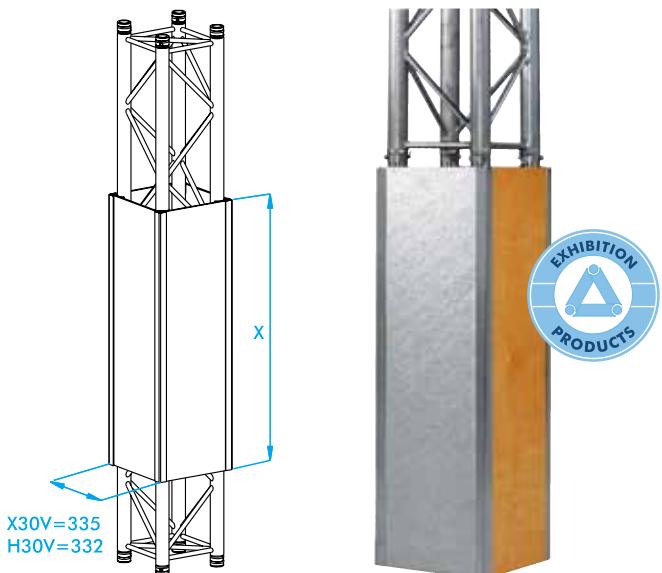

- Loading capacity of 250 kg
- Suitable for any type of ratchet strap
- No loose parts
- Spring loaded secured beams
- Self weight; 25kg

# EXHIBITION

ACC-COV-100-X/H      Weight = 0,58kg  
ACC-COV-200-X/H      Weight = 1,16kg  
ACC-COV-300-X/H      Weight = 1,74kg

## COVER UP

The Prolyte Cover Up system allows you to use truss as a structural element and as the basis of your integrated stand design at the same time. The Cover Up is a corner profile element that can easily be mounted to all square trusses from the Prolyte X&H truss series. Once the profiles have been placed, the panels can be slid through the profiles, thus simply hiding the truss behind them.

Cover Up profiles are available in lengths of: 50 cm, 100 cm, 200 cm and 300 cm. Four pieces per truss should be ordered. Maximum panel thickness: 10 mm.

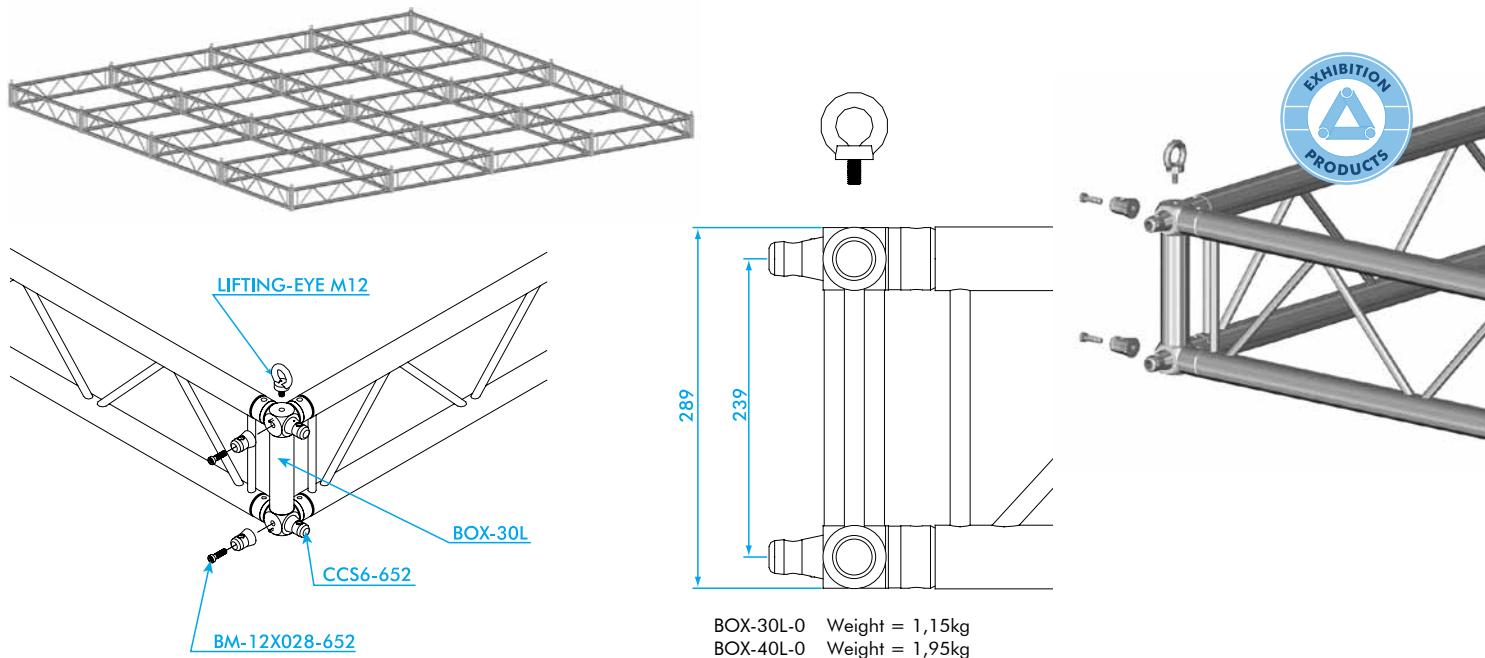

## PEDESTAL

The adjustable Pedestal combines practical solutions with designer looks. This element enables you to bridge height differences to a maximum of 50 mm, which is enough to cover any uneven floor.

The Pedestal is designed for the E and X&H truss series.

Total Pedestal height: min.: 350 mm, max.: 400 mm.

Maximum load: 200 kg.

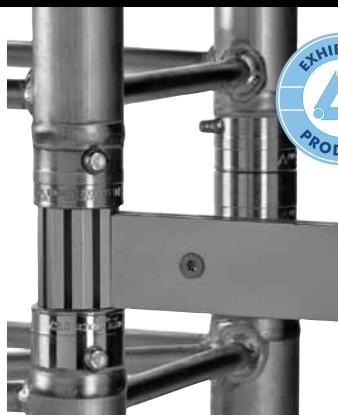

## MATRIX FRAME

Based on single box corner ribs and ladder truss from the complete Prolyte truss range, you can build frames of any desired dimension.

The result is the so-called Matrix Frame, a flexible and easy solution with many application possibilities.

It can be used in a horizontal as well as a vertical plane. With additional lifting eyes a hoisting point can be bolted to each junction. The high loading capacity of the junction ensures considerable advantages in terms of the overall capacity of your grid.

## EXHIBITION

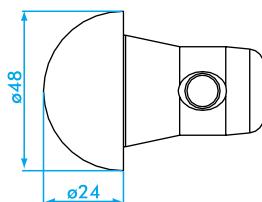

ACC-A-OCT-0050  
ACC-A-OCT-0075

Weight = 0,22kg  
Weight = 0,24kg

### EXHIBITION ADAPTER

The Prolyte Exhibition Adapter makes it possible to combine any truss structure with common exhibition systems. The horizontal supports of these octagonal extruded exhibition

systems can be attached to your truss construction by means of this adapter. The exhibition adapter is available in lengths of 50 mm and 75 mm. It can only be used in a vertical direction.

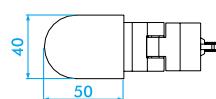

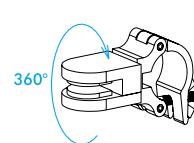

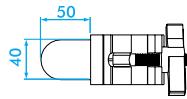

ACC-512 Weight = 0,15kg

### END CAP

The aluminium End Cap will give your truss parts a "finished" and highly aesthetic look. The End Cap is based on the CCS6 system and is available for all X&H series truss.

CLP-535SL-RPC Weight = 0,63kg  
CLP-535SL-FPC Weight = 0,63kg

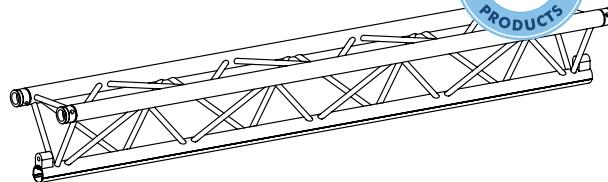

CLP-435-RPC Weight = 0,25kg

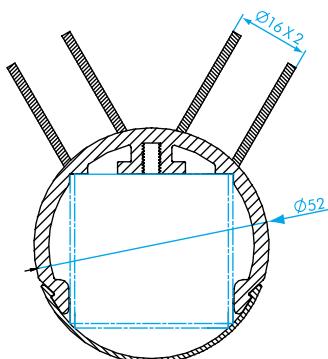

### PANEL CLAMPS

Prolyte Panel Clamps are suitable for attaching panels or pictures to the trusses in any desired position. To be able to obtain different angles, the aluminium clamps are fully adjustable.

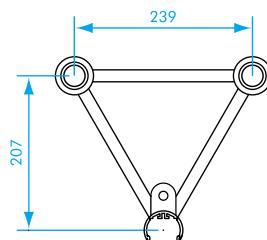

The clamps are able to hold different materials up to a thickness of 6 to 10 mm.

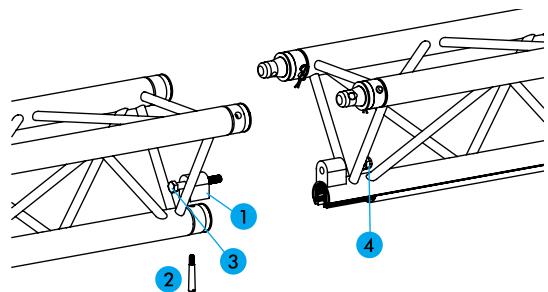

CT-X30D

Cross section with measurements for the fitting of the circuit track.

Cross section with measurements.

Coupling of CT truss to a regular X30D truss with the special adapter.

## CIRCUIT TRACK TRUSS

Based on the standard X30D truss, Prolyte has designed a truss which is capable of holding any type of existing circuit track.

Any circuit track can easily be integrated in the special lower tube of the circuit track truss. The lower tube opens to mount the circuit track. After the circuit track is mounted, the lid can be replaced to cover and protect the track.

When the circuit track is needed, the lid on the lower tube can easily be opened to give access to the track. The track is suitable for Erco, Hoffmeister, Staff, Targetti, Eutrac and ASS circuit tracks.

A special adapter on the lower tube makes it possible to connect the circuit track truss to regular X30D truss, thereby integrating the circuit track into your complete truss structure.

The adapter is mounted to the truss with a special spigot pin, after which the connection is closed with a hexagon socket screw (M12 x 100).

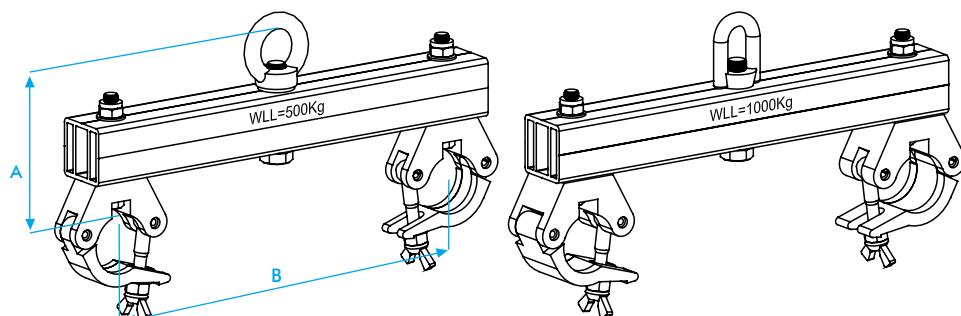

1. Adaptor CT-30D-CON
2. Special spigot CT-CCS6-604
3. Bolt BM-M12x100-IB
4. Nut BM-M12-N

## LIFTING BRACKET

**ACC-40D/V-LIFT**

lifting bracket WLL 500kg

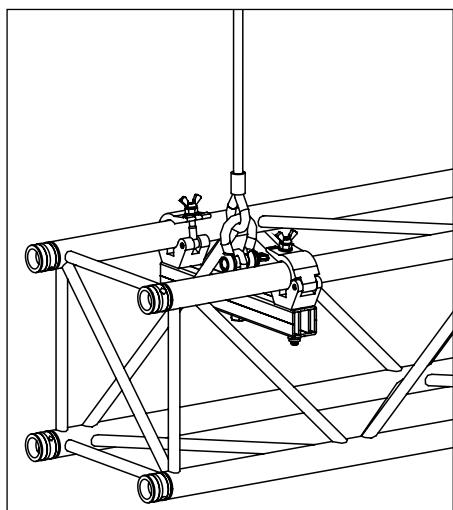

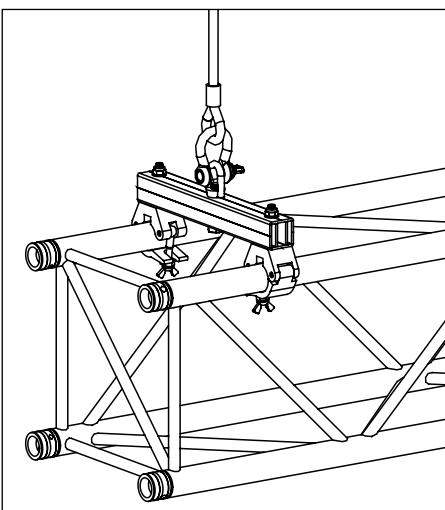

**ACC-40D/V-LIFT**

lifting bracket WLL 1000kg

Prolyte lifting brackets are the ideal solutions for permanent or semi-permanent installations, where the suspension point must be reliable, stable and part of the overall truss design. The lifting brackets are made of a special extruded aluminium profile. Prolyte has two types of lifting brackets in several sizes to mount on your truss: the WLL 500 kg or 1000 kg.

The lifting eye is limiting the load bearing capacity. The lifting bracket can also be mounted on the bottom chords of the truss by simply bolting the lifting eye at the other side of the profile. For proper use of brackets and lifting eyes, please refer to the Black Book "Technical Matters".

LIFTING BRACKET	mm

## RIGGING HARDWARE

### STEEL WIRES WITH COVER

**SW-08-100EE/C**

Steel wire 8 mm L-100 eye/eye.  
WLL 750 kg.  
Also available in the following lengths:  
L150, L200, L250, L300, L500, L750

**SW-10-100EE/C**

Steel wire 10 mm L-100 eye/eye.  
WLL 1000 kg.  
Also available in the following lengths:  
L150, L200, L250, L300, L500, L750

**SW-13-100EE/C**

Steel wire 13 mm L-100 eye/eye.  
WLL 2400 kg.  
Also available in the following lengths:  
L150, L200, L250, L300, L500, L750

### STEEL WIRES WITHOUT COVER

**SW-10-150EE**

Steel wire 10 mm L-150 eye/eye  
WLL 1000 kg.  
Also available in the following lengths:  
L150, L200, L250, L300, L500, L750

**SW-10-150EH**

Steel wire 10 mm L-150 eye/eye with  
hook WLL 1000 kg.  
Also available in the following lengths:  
L150, L200, L250, L300, L500, L750

**SW-13-150EE**

Steel wire 13 mm L-150 eye/eye  
WLL 2400 kg.  
Also available in the following lengths:  
L150, L200, L250, L300, L500, L750

**SW-13-150EH**

Steel wire 13 mm L-150 eye/eye with  
hook WLL 2400 kg.  
Also available in the following lengths:  
L150, L200, L250, L300, L500, L750

### SHACKLES

**RI-SH3,2T / RI-SH4,7T**

shackles WLL 3,2 / 4,7 ton, bolt/nut

**RI-O-RING-3T**

Top ring WLL 3 ton

**BM-M12-EB**

Lifting eye for triangular box corner

# RIGGING HARDWARE

## ROUND SLINGS

**RS-1T-100 / RS-2T-100 / RS-3T-100**  
roundslings L100, WLL 1000 kg, 2000 kg, 3000 kg.  
Available in different lengths.  
All round slings have a black cover.

## SOFT STEEL

**SS-2T-100**  
soft steel L100, WLL 2000 kg.  
Also available in the following lengths:  
L050, L100, L200, L300

**BGV-C1 Approval**

All Soft steels have a black cover.  
No redundant safety needed.

## CHAIN CLUTCHES

**CH-07-150CHH**  
Shortening chain WL 1,5m, WLL 1,5 ton

**CH-07-200HCSH**  
Shortening chain WL 2m, WLL 1,5 ton

**CH-10-200CRH**  
Shortening chain WL 2m, WLL 3 ton

## HAMMER

**TOOL-HAM-500 / TOOL-HAM-750**  
copper hammer

## RATCHETS

**RA-2T-200HH**  
ratchet L200, WLL 2000 kg (hook-hook)  
Also available in the following lengths:  
L400, L600, L750, L1100

**RA-1T-150OE**  
ratchet L150,WLL 1000 kg (open end)  
Also available in the following lengths:  
L400, L600, L750, L1100

**RA-5T-200HH**  
ratchet L200, WLL 5000 kg (hook-hook)  
Also available in the following lengths:  
L400, L600, L750, L1100

All ratchets are black.

# TOWERS

© PROLYTE SALES BV

## System characteristics

The Prolyte tower systems consist of four types of rigging towers and the MPT, ST and CT ground support systems. All tower systems are based on standard Prolyte truss. Extending your stock towards more complex systems like towers or roofs works like a step-by-step, cost-efficient investment. You only need to buy the additional parts, like base or top sections. This offers flexibility and optimum economic use of your trusses.

## Rigging towers

The rigging towers are designed as stand-alone towers to support PA clusters or audience lighting. Rigging towers are available in types ranging from 800 to 2300 kg in terms of allowable load, and from 7,60 m to 16 m as regards lifting height. Rigging towers can be built on any even surface and are specially designed for outdoor use.

## Ground support towers

The ground support towers are designed to support a grid without having the need for suspension points. They can be used in a goalpost setup (two towers) or as ground support (three or more towers). The ground support towers are available in three types, the MPT Tower (to be used in combination with all trusses from the Multi-Purpose series), the ST tower (to be used in combination with all the trusses from the Heavy-Duty series) and the CT tower (to be used in combination with the B100RV and S100F truss). Ground support towers can be built on any even surface and are designed for indoor as well as outdoor use.

## Coupling system

The RT-H30V, MPT and ST mast sections use the CCS6 system. The RT-36V, RT-S52SV, RT-B100RV and CT mast section use the CSS7 system. The Conical Coupling system allows fast, efficient and reliable coupling of your towers.

## RT-H30V

Photo: Cazemier BV, The Netherlands

Photo: JSA, Russian Federation

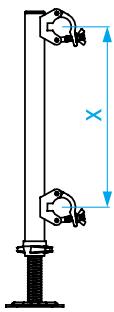

Photo: JSA, Russian Federation

The light-duty RT-H30V version has a loading capacity of 800 kg and a maximum lifting height of 7,60 m. The RT-H30V is based on H30V truss with stabilizers of 60 mm tube. It has an self-weight of 260 kg.

The legs of the V-shaped base can be levelled by means of screw jacks which are attached to the side of the legs. After the base is placed, the mast can be built and erected using the hinges on the base corner.

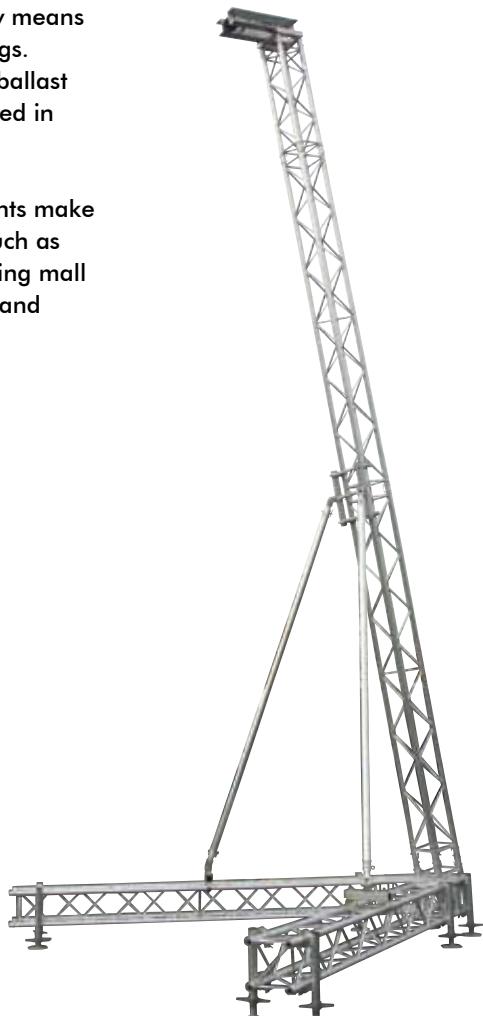

The mast should be stabilised by means of the braces, which fix to the legs. After the system is levelled and ballast is applied, the load can be hoisted in position.

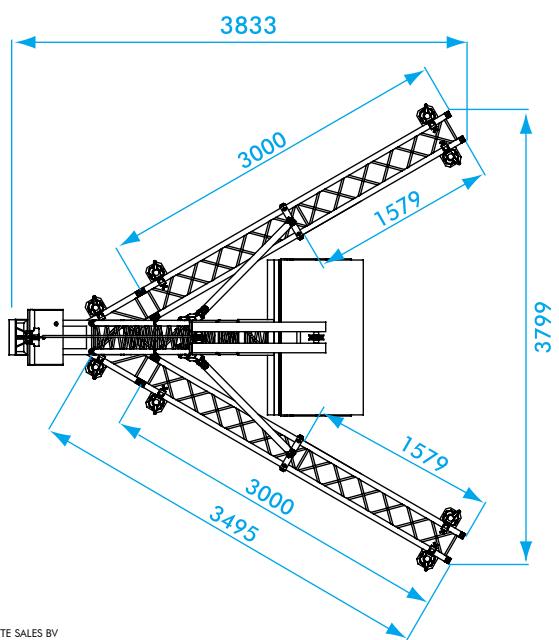

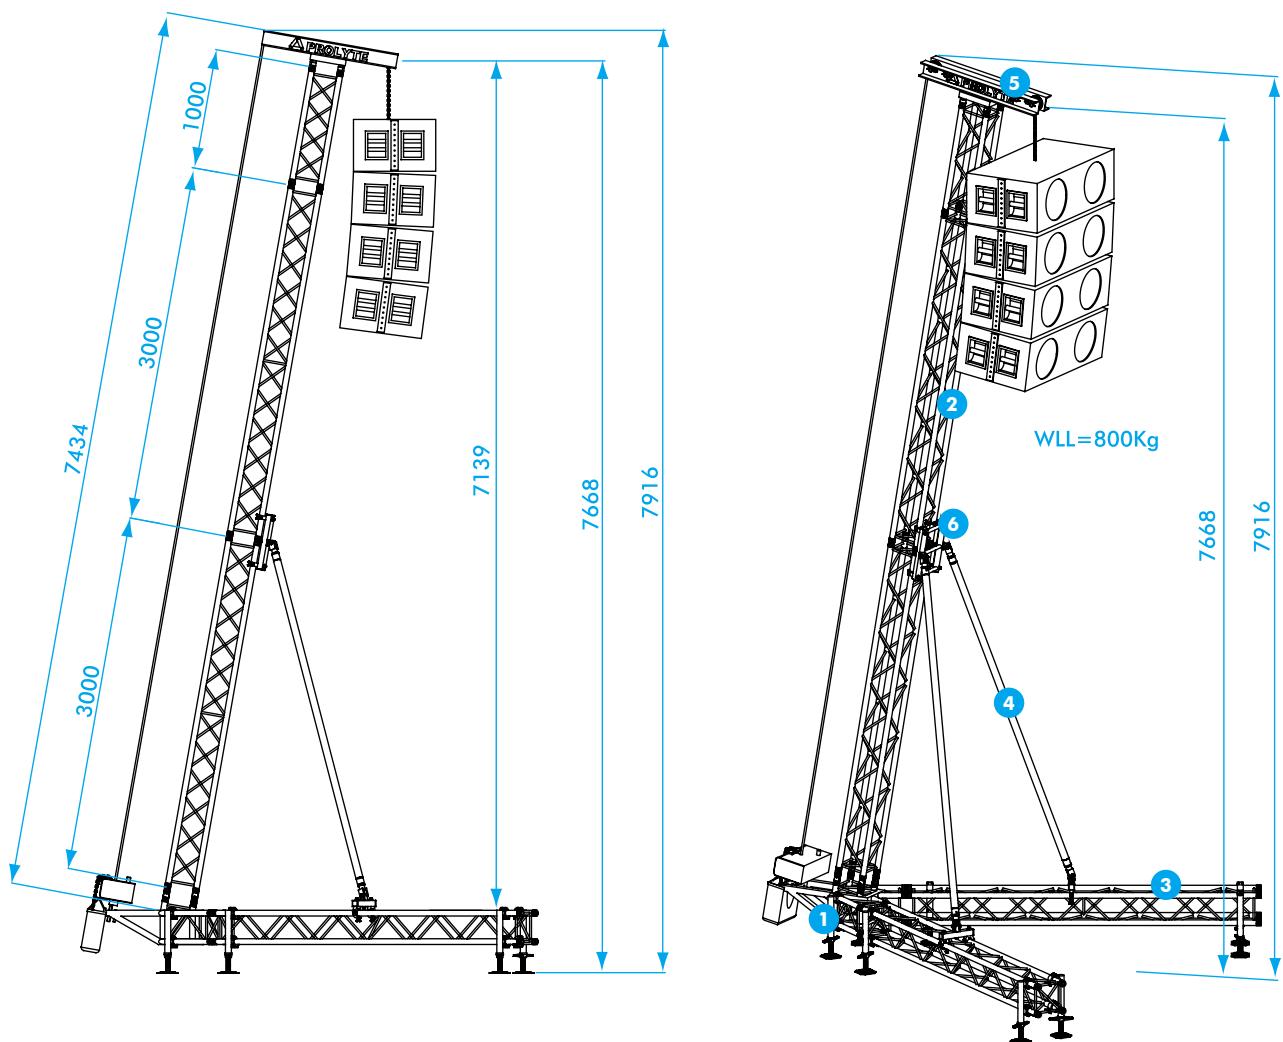

The relatively small measurements make it suitable for all applications, such as outdoor events, concerts, shopping mall entrance halls, exhibition areas and theme parks.

## RT-S36V

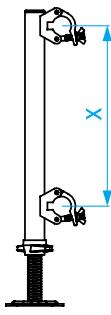

The medium-duty RT-S36V version has a loading capacity of 1000 kg and a maximum lifting height of 9,25 m. The RT-S36V is based on S36V truss with stabilizers of 60 mm tube. It has an self-weight of 415 kg.

The legs of the V-shaped base can be levelled by means of screw jacks which are attached to the side of the legs. After the base is placed, the mast can be built and erected using the hinges on the base corner.

The mast should be stabilised by means of the braces, which fix to the legs. After the system is levelled and ballast is applied, the load can be hoisted in position.

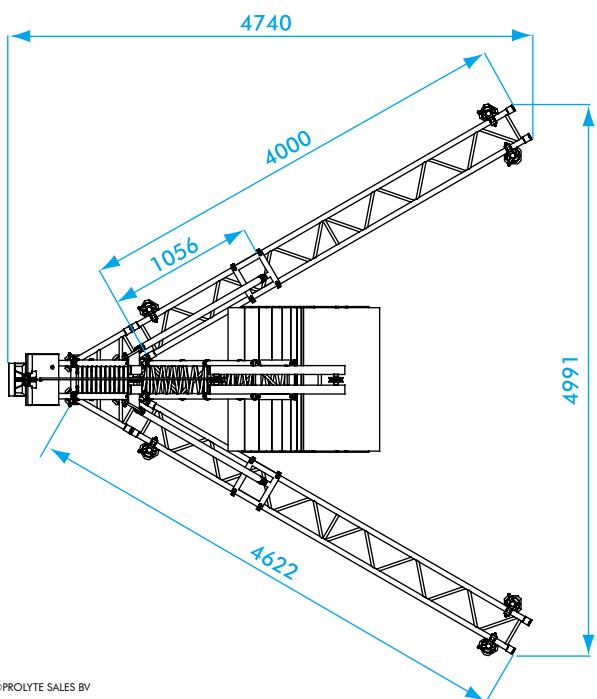

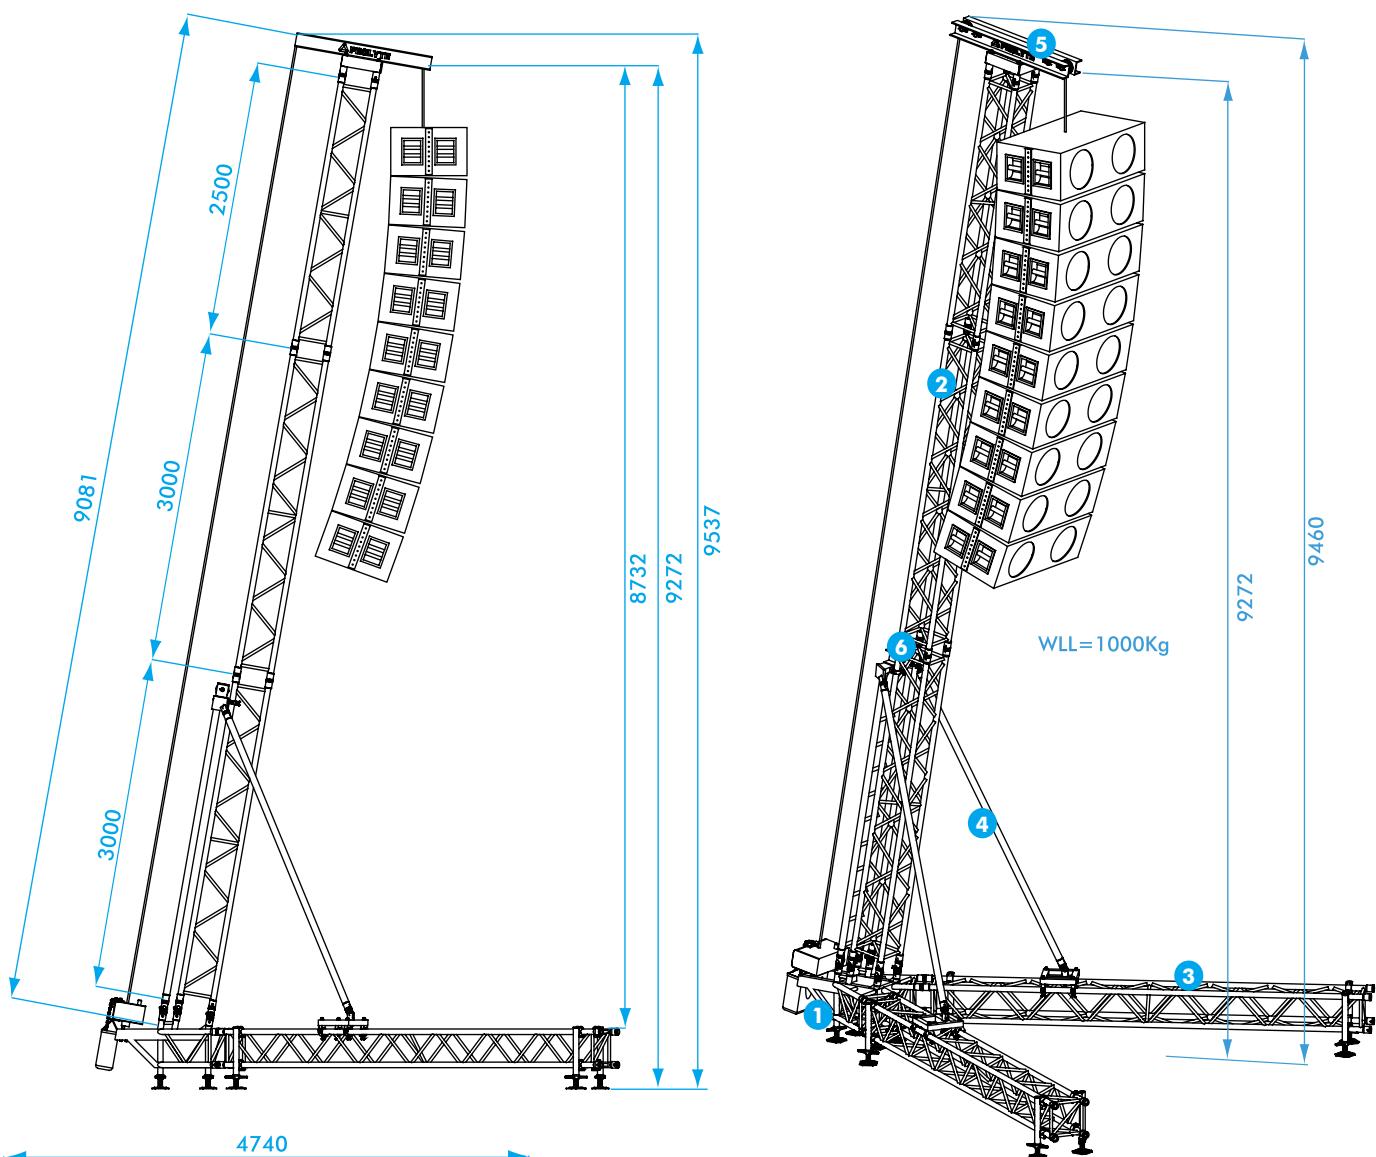

The relatively small measurements make it suitable for all applications, such as outdoor events, concerts, shopping mall entrance halls, exhibition areas and theme parks.

## RT-S52SV

Photo : ModifiC, Russian federation  
Project : RT Sound - Nokia Snowboard

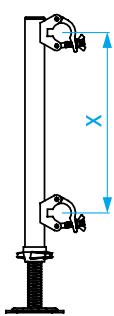

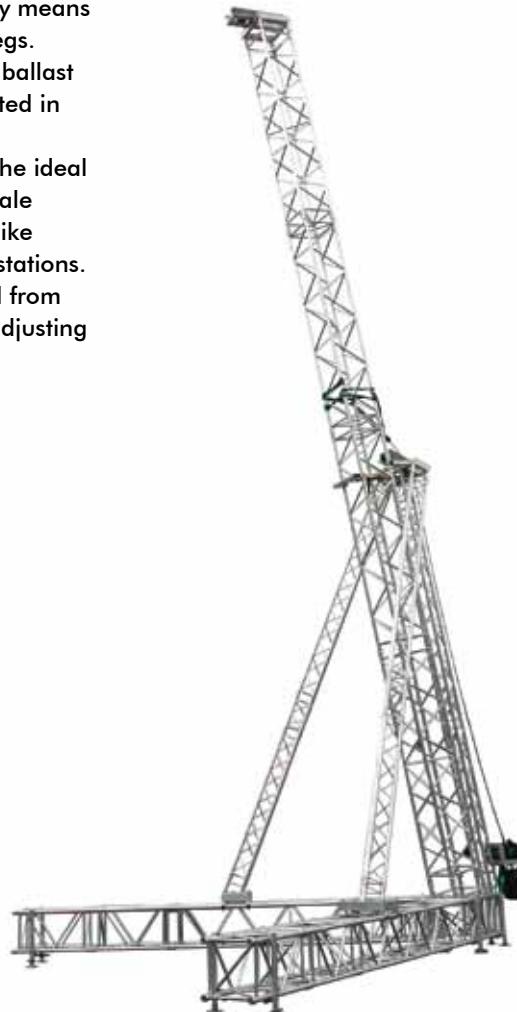

The medium to heavy-duty RT-S52SV version has a loading capacity of 1400 to 2900 kg and a maximum lifting height of 12,95 m (please refer to the technical specifications table for further details). The RT-S52SV is based on S52SV truss with stabilizers of H30D truss. It has an self-weight of 463-520 kg.

The legs of the V-shaped base can be levelled by means of screw jacks which are attached to the side of the legs. After the base is placed, the mast can be built and erected, using the hinges on the base corner.

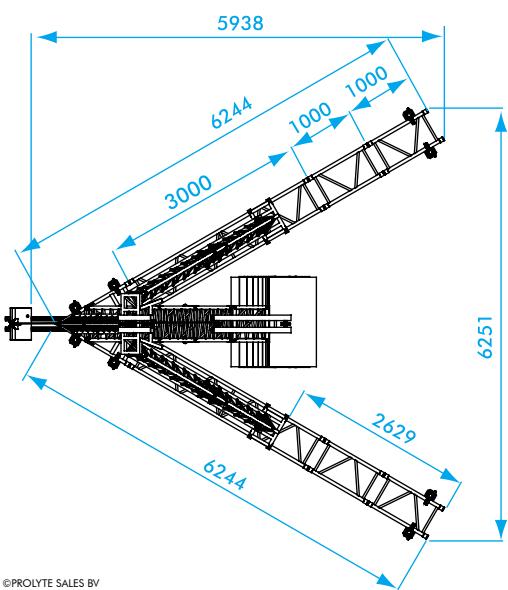

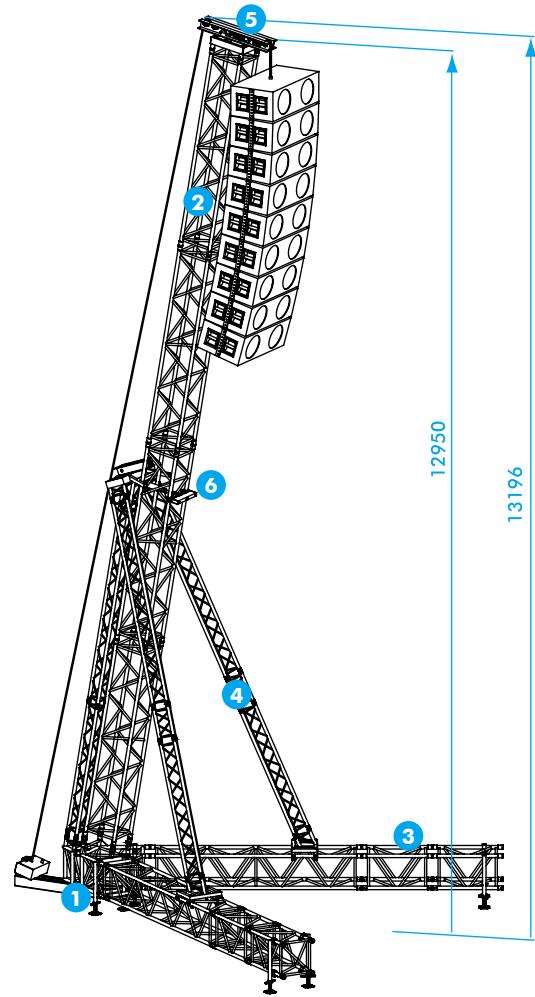

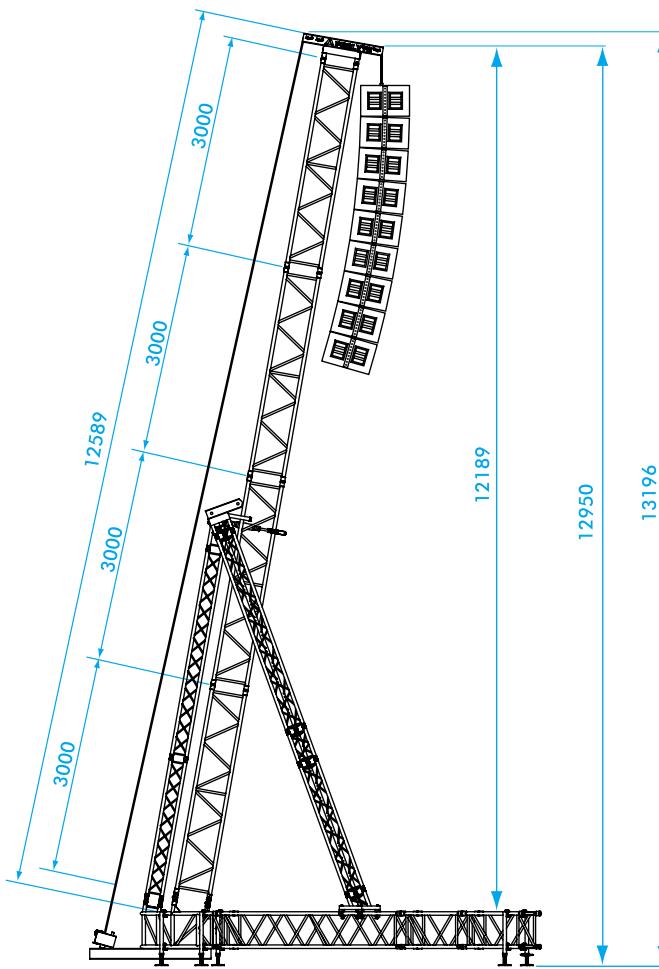

The mast should be stabilised by means of the braces, which fix to the legs. After the system is levelled and ballast is applied, the load can be hoisted in position.

The RT-S52SV rigging tower is the ideal solution for medium to large-scale events where flexibility counts, like concerts or other public manifestations. The RT-S52SV can be converted from one type to another by simply adjusting the length of the mast.

## RT-B100RV

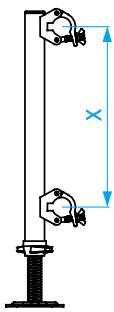

Photo : Italstage, Italy

The heavy-duty RT-B100RV version has a loading capacity of 2300 kg and a maximum lifting height of 15,95 m. The RT-B100RV is based on B100RV truss with stabilizers of H30D truss. It has an self-weight of 695 kg.

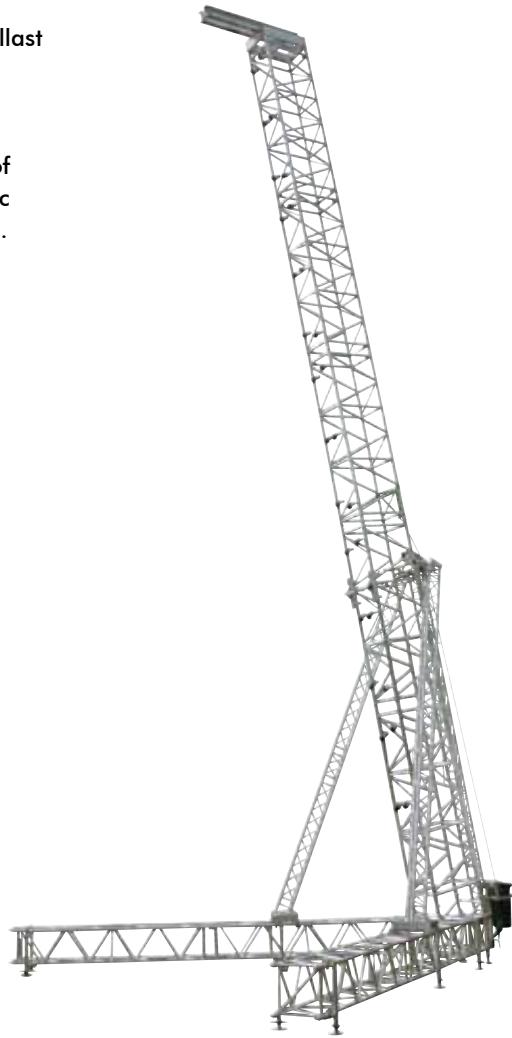

The legs of the V-shaped base can be levelled by means of screw jacks which are attached to the side of the legs. After the base is placed, the mast can be built and erected using the hinges on the base. The mast should be stabilised by means of the braces, which fix to the legs.

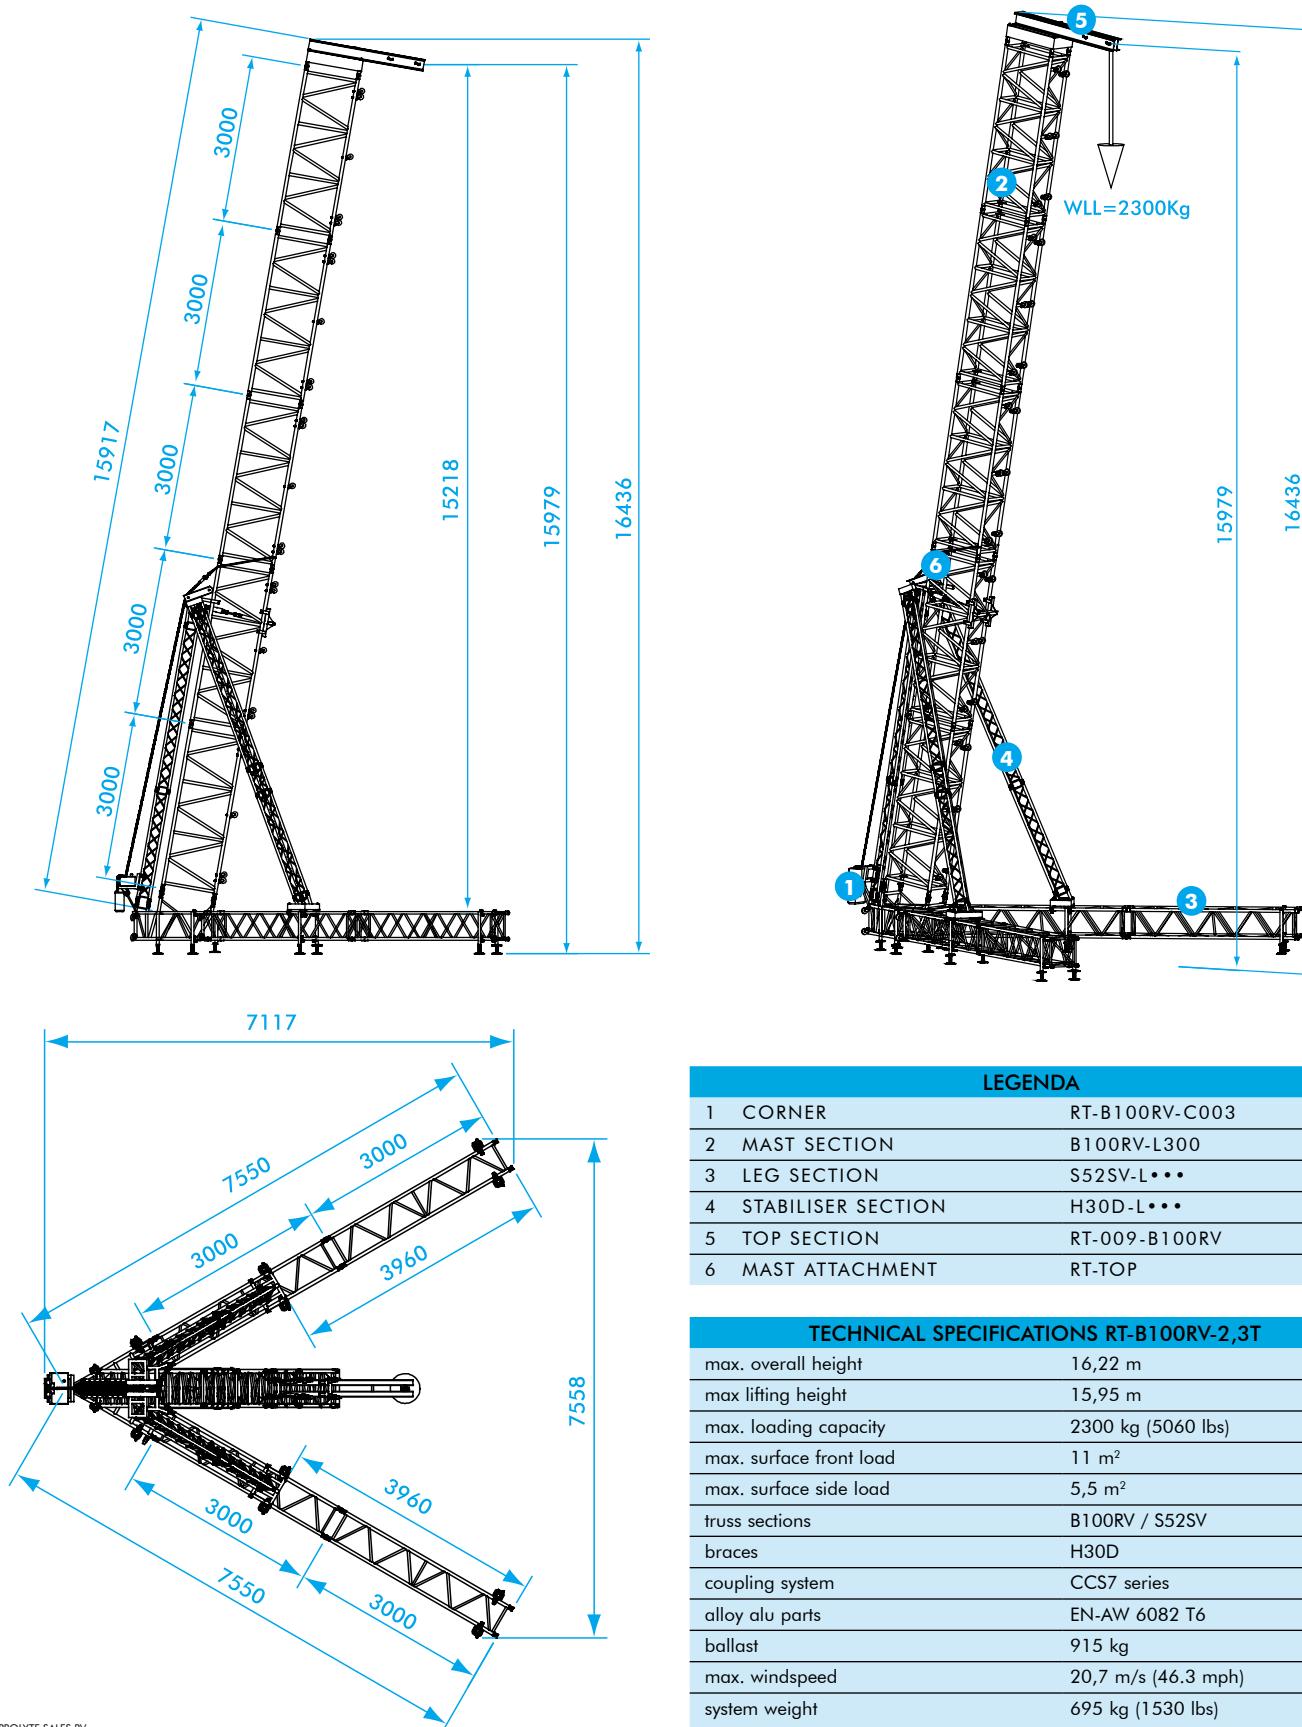

After the system is levelled and ballast is applied, the load can be hoisted in position. The sturdy and stable RT-B100RV rigging tower is a safe and suitable solution for all sorts of settings, like outdoor events, public manifestations and large stadiums.

ACC-SPIN-ATT-52

ACC-SPIN-LAY/60  
spindle to be ordered separately

## MPT TOWER

Photo : JSA, Russian Federation

The MPT tower is based on H30V truss and uses a sleeve block that is suitable to fit any of the 30 or 40 series trusses to all four sides by means of bolted, either male or female CCS6 couplers. In combination with an adapter plate it is also possible to use the sleeve block with either S36R or S36V truss. The MPT tower has an self-weight of 115 kg.

The MPT sleeve block is a fully bolted structural element, making it much stronger and more precise than conventional welded versions. The top section and base section can facilitate the use of either a hand winch or a chain hoist.

The MPT tower is a cost-effective investment. You only have to buy the special parts if you wish to expand your truss system with towers.

# MPT TOWER

## TECHNICAL SPECIFICATIONS MPT TOWER

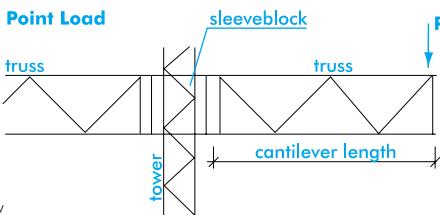

max. height	7,50 m / 9,00 m
max. loading capacity	1000 kg*
max. load handwinch	750 kg
type mast sections	H30V
sleeve block suitable for truss-series	X or H30D, X or H30V, X or H40D and X or H40V, S36R, S36V
alloy alu parts	EN-AW 6082 T6
coupling system tower	CCS6 series
self weight	115 kg

\* There is a structural relation between tower length and size, further the applied load and the method of restraining the tower base also have its influence on the total loading capacity. All these factors must be taken into consideration when determining the allowable load and tower length.

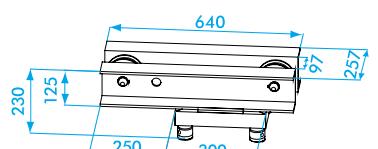

The allowable load given is based on a uniformly distributed load (UDL). Load cases with several pointloads can show much better loading capacities.

## ALLOWABLE CANTILEVER LOAD FOR MPT-010 SLEEVE BLOCK

MPT-010

Sleeve block.

MPT-004

Base with MPT-012 long outriggers.

## MPT TOWER

- 1** The black coated, steel base (MPT-004) is equipped with 4 castors and four half conical couplers (CCS6-602) for the attachment of the mast section. The base can be used with either short outriggers (MPT-011) or long outriggers (MPT-012).

- 2** To secure the outriggers within the base, a trigger pin is placed on the inside of the base frame. Pull the pin outwards when mounting the outriggers.

- 3** Disassemble the hinge set, mount the half hinges to both the mast sections (H30V truss). Male and female connections should be mounted diagonally (as shown in the picture) in order to facilitate the erection of the mast.

- 4** A completely mounted hinge set. First locate the truss pins on one side. The truss now works as a hinge and can be erected easily. Subsequently locate the remaining truss pins in the other side to fix the mast into position. Per tower 4 x CCS6-H needed. (hinge set MPT•ST tower).

- 5** Unscrew the screw jacks in the outriggers. Make sure that the castors of the base are free of any load. The complete load of the base should be supported by the screw jacks. Level the base by adjusting the screw jacks. The base must be perfectly level before the mast is erected. Long outriggers are needed for structures with three towers or less.

- 6** To use the MPT tower in combination with a chain hoist, Prolyte provides the motor attachment (MPT-041). This supplementary component can be attached to the base and has a fixing point for the chain hoist hook.

- 7** The sleeve block is lifted by use of a chain hoist or a hand winch. Chain hoists can be mounted with the help of the motor attachment (MPT-042). Chain hoists can also be mounted to the grid and sleeve block. WLL 1000 kg.

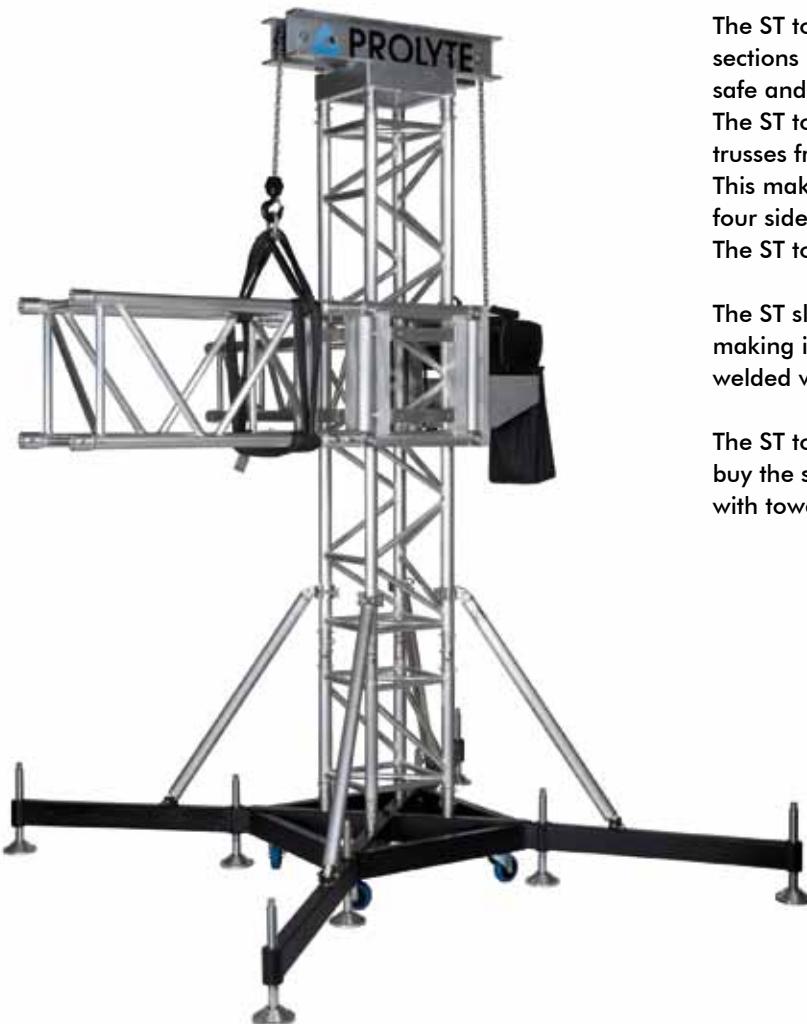

- 8** Prolyte recommends that, during storage and transportation, the MPT towers be mounted as an assembly of the following components: base section, 50 cm mast section, sleeve block, hinges and top section. This combination facilitates fast, efficient loading and building of the towers (size 60 x 60 x 115 cm, weight +/- 115 kg).

## ST TOWER HEAVY DUTY TOWER SYSTEM

Photo : Enttech, Greece  
Project : Voala Beach, Athens, Greece

The ST tower is based on S40T mast sections. These mast sections have one-sided horizontal bracing to facilitate the safe and easy climbing of the towers.

The ST tower uses several sleeve blocks that combine all the trusses from the S and B series.

This makes it possible to fit any of the S series trusses to all four sides by means of bolted female CCS7 couplers.

The ST tower has an self-weight of 120 kg.

The ST sleeve block is a fully bolted structural element, making it much stronger and more precise than conventional welded versions.

The ST tower is a cost-effective investment. You only have to buy the special parts if you wish to expand your truss system with towers.

Feet	1.64	3.28	4.92	6.56	8.20	9.84	11.48	13.12	AVERAGE WEIGHT IN POUNDS PER FEET = 6,93 LBS

## ST TOWER HEAVY DUTY TOWER SYSTEM

- 1** The black coated, steel base (ST-004) is equipped with 4 castors and four female couplers (CCS6-651) for attachment of the mast section. In most cases, the first mast section can be 50 cm long, however, when S66 or S100 truss is used in the grid a mast section of 100 cm should be used. The base can be used with either short outriggers (ST-011) or long outriggers (ST-012).

- 2** To secure the outriggers within the base, a trigger pin is placed on the inside of the base frame. Pull the pin outwards when mounting the outriggers.

- 3** The ST tower can only be used with a chain hoist. The hoist can be attached in two ways (please see pictures 7 and 8).

- 4** Disassemble the hinge set, mount the half hinges to both mast sections (S40T truss). Male and female connections should be mounted diagonally (as shown in the picture), in order to facilitate the erection of the mast.

- 5** A completely mounted hinge set. First locate the truss pins on one side. The truss now works as a hinge and can be erected easily. Then locate the remaining truss pins on the other side to fix the mast into position. Per tower 4 x CCS6-H needed (hinge set MPT•ST tower).

- 6** Unscrew the screw jacks in the outriggers, making sure that the castors of the base are free of any load. The complete load of the base should be supported by the screw jacks. Level the base by adjusting the screw jacks. The base must be perfectly level before the mast is erected. Long outriggers are needed for structures with three towers or less.

- 7** To use the ST tower in combination with a chain hoist, Prolyte provides the motor attachment (ST-041). This supplementary component can be attached to the base and has a fixing point for the chain hoist hook. WLL 1000 kg.

- 8** Chain hoists can be attached by use of the motor attachment (ST-042). Chain hoists can also be mounted to the grid and sleeve block.

- 9** Prolyte advises that during storage and transportation the ST towers are mounted as an assembly of the following components; base section, 50 cm mast section, sleeve block and top section. This combination facilitates fast, efficient loading and building of the towers (size 80 x 80 x 120cm, weight +/- 120 kg).

## CT TOWER

Photo : ModifC, Russian Federation  
Project : Russian telecommunication company "Caravan"

The CT tower is based on C52T mast sections. These mast sections have one-sided horizontal bracing to facilitate the safe and easy climbing of the towers. C52T truss is constructed of main tubes of 60 x 5 mm and diagonals of 30 x 3/48 x 3 mm. Use the CCS7 coupling system with the CCS7-704 or Z-CCS7-703-C52T shortened spigot pin. The latter one is finished in yellow to be easily distinguishable from regular pins.

The base section of the CT tower is similar to the ST tower; the outside dimensions and setup are the same.

Extra spindles are added to the base section to absorb the extra forces resulting from the tower's higher loading capacity. Existing ST base sections can be upgraded to accommodate CT towers on request.

The CT tower uses several sleeve blocks that combine all the trusses from the S and B series.

This makes it possible to fit almost all S series trusses to all four sides by means of bolted female CCS7 couplers.

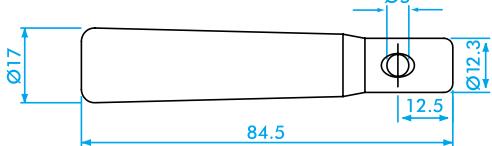

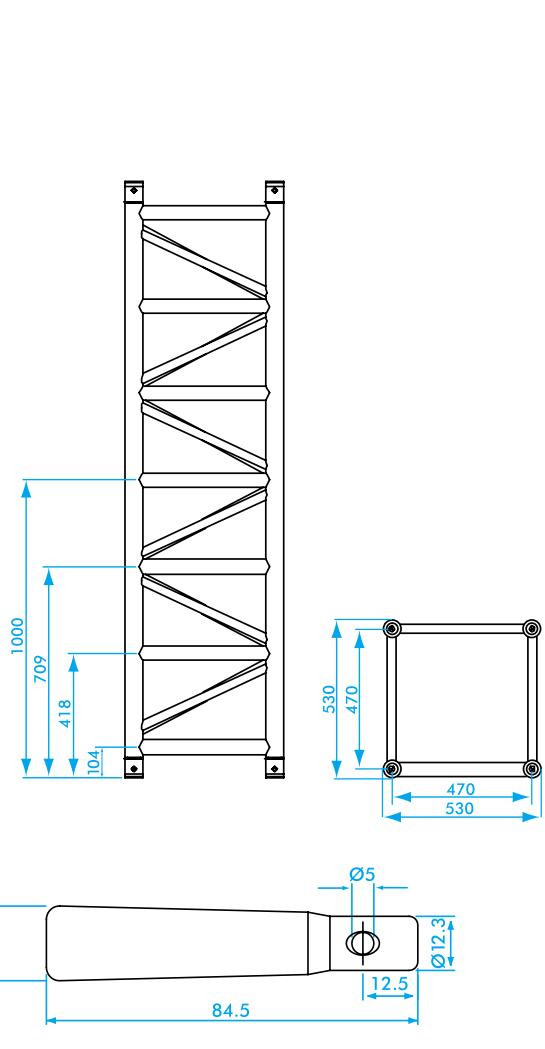

The outside dimensions of the CT sleeve block are the same as the ST sleeve block; both can be combined in one grid. The CT tower has an self-weight of 140 kg.

The CT sleeve block is a fully bolted structural element, making it much stronger and more precise than conventional welded versions.

The CT tower is a cost-effective investment. You only have to buy the special parts if you wish to expand your truss system with towers.

# CT TOWER

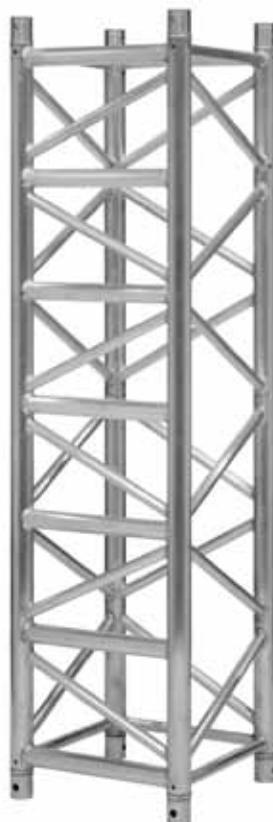

Z-CCS7-703-C52T  
Special pin for CT mast yellow passivated

TECHNICAL SPECIFICATIONS CT TOWER	
max. height	20,00 m
max. loading capacity*	5000 kg**
sleeve block suitable for truss-series	S52F•V, S66R•V, S100F and B100RV (with various sleeve blocks)
alloy alu parts	EN-AW 6082 T6
main tubes mast sections	60 x 5 mm
braces mast sections	30 x 3 / 48 x 3 mm
coupling system tower	CCS7 series

\*) to be used with chainhoist only.

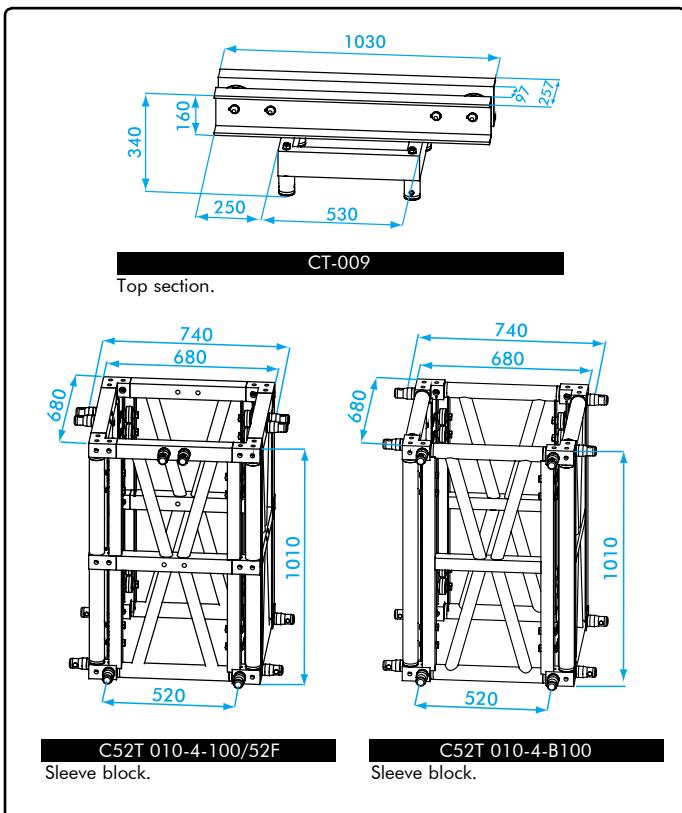

\*\*) There is a structural relation between tower length and size, further the applied load and the method of restraining the tower base also have its influence on the total loading capacity. All these factors must be taken into consideration when determining the allowable load and tower length.

The allowable load given is based on a uniformly distributed load (UDL). Load cases with several pointloads can show much better loading capacities.

# OUTDOOR ADVERTISEMENT

Photo : Rohr Autohaus-Optimierung, Germany  
Project : Highlight Platz Grasser

## Advertisement towers

Outdoor advertisement is a perfect medium to bring your product or message to the attention of a large public. In close cooperation with Rohr Autohaus from Germany, Prolyte has developed a range of towers and pylons for this type of outdoor mass communication.

## Reliable constructions

Outdoor advertisement towers or billboards constructed from truss require some extra attention with regard to setup and structural calculations.

Environmental factors such as wind force have to be calculated and, furthermore, the stability of the structure needs to be guaranteed. Prolyte offers a range of standard sizes of triangular as well as square advertisement towers, which all comply with the applicable regulations and standards.

## Based on standard truss systems

The standard advertisement tower constructions from Prolyte consist of:

- Triangular towers up to 12 m in height constructed from H40V truss
- Triangular and square towers ranging from 6-10 m in height constructed from X&H30 en H40 truss
- Stand-alone pylons up to 10 m in height constructed from S66 and S52 truss

The three-sided advertisement space amounts to 2,5 x 2,5 m per side.

For more information, please contact Prolyte's Customer Services.

## LED / VIDEO SCREEN

Photo : AV Point B.V., The Netherlands

### LED or Video Screen support solutions

With the ever-increasing use of outdoor LED or Video screens, Prolyte has engineered the perfect solution to hang your screen in an efficient and safe way.

Prolyte has developed 3 standard screen solutions, based on the MPT, ST and CT towers. All constructions are provided with a complete set of calculations. Variations on the standard solutions are available on request.

### Reliable constructions

LED Screen constructions require extra attention with regard to set up and structural calculations. Environmental factors, such as wind force, have to be calculated and furthermore, the stability of both the structure and the screen needs to be ensured. All Prolyte constructions comply with the applicable regulations and standards, like wind force resistance up to wind speeds of 28 m/s.

### Each system has unique requirements

Due to the complex interaction of forces, resulting from screen surface, wind speeds, system weight and required screen height, each system is unique with respect to the calculation of the complete construction. Requirements for larger spans, higher loading or added screen height need to be calculated. Relying on its experienced engineering department, Prolyte is able to offer this distinctive service.

### Based on standard truss systems

LED screen constructions from Prolyte consist of standard products from both the tower and truss range. There is no need to invest in special parts. Based on your standard rental stock; any suitable application can be constructed.

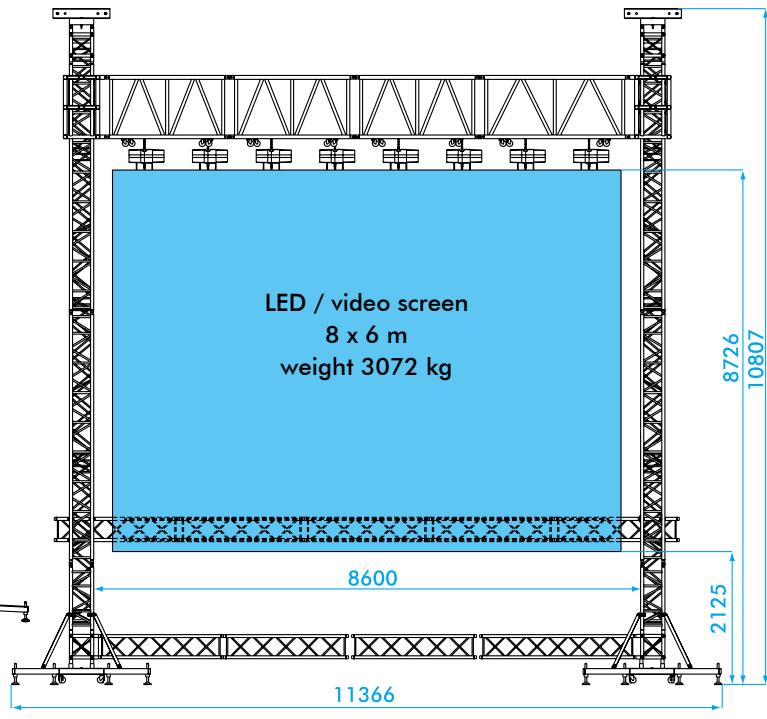

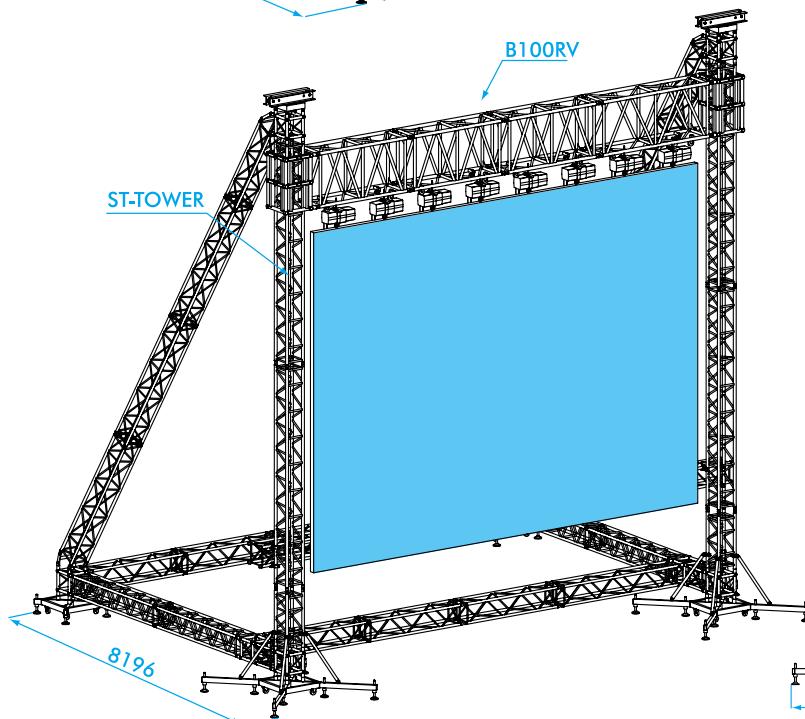

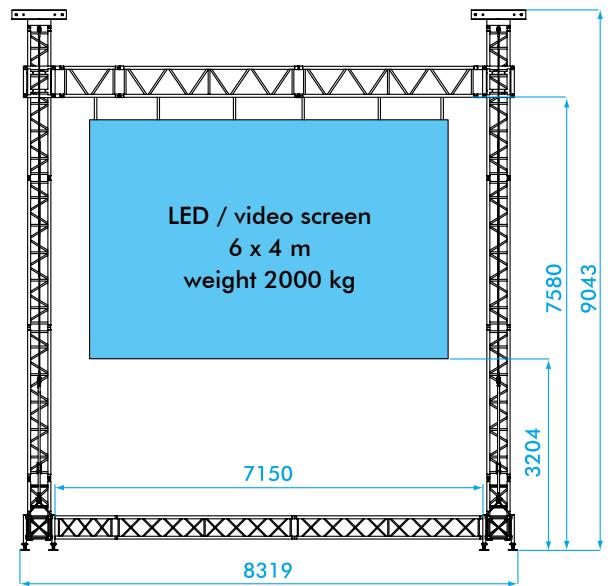

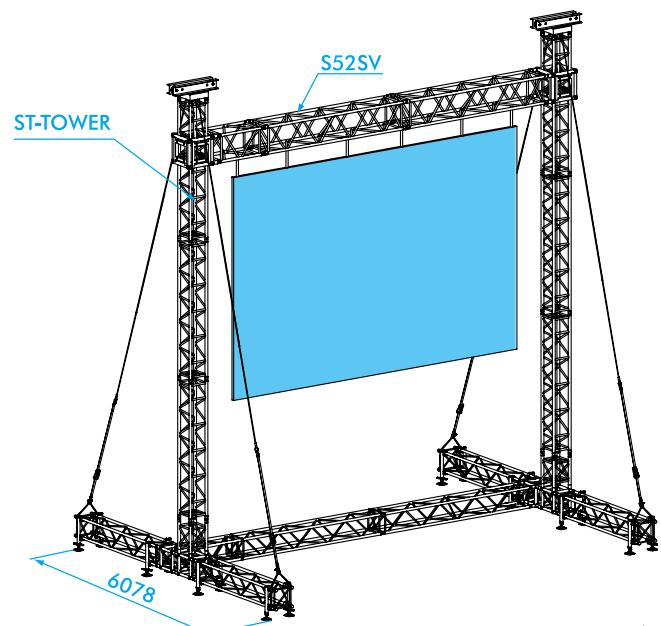

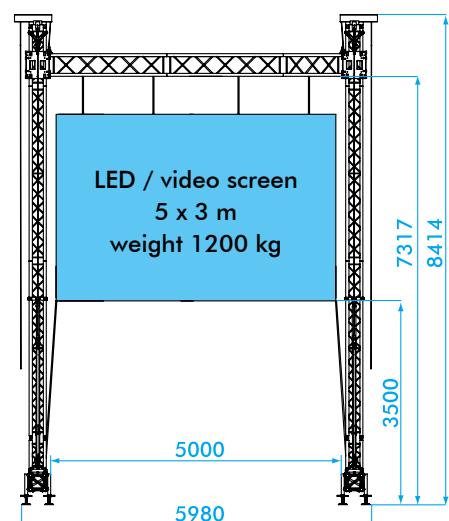

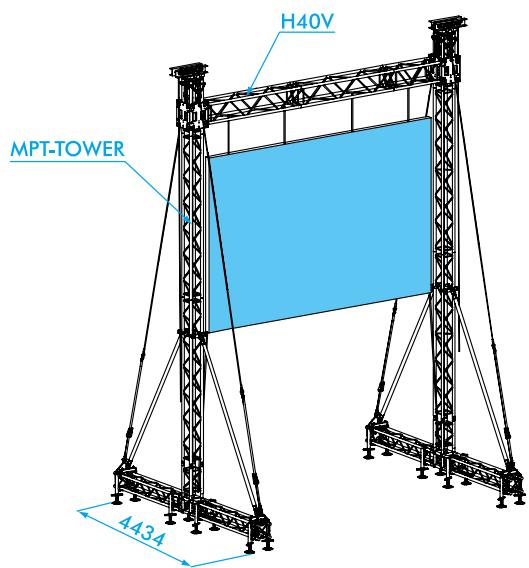

For more information, please contact Prolyte's Customer Services.

### Technical Specifications

Allowable loading ranging from	500 - 5000 kg
Screen surface ranging from	6m <sup>2</sup> to 60m <sup>2</sup>
Max. Windspeed	13,8 to 28 m/s
Design Standards	DIN 4113 / EN 13814

## LED / VIDEO SCREEN

## BARRIER

Photo: Wilco Pijnenburg, The Netherlands

### System characteristics

The Prolyte Barrier is a lightweight crowd control system made of aluminium. The barrier has an self-weight of only 35 kg per 1 m section.

The smooth round top bar and the bottom bar incorporate a stainless steel 15 mm slot pin that provides easy connection points for the barriers. The bottom side can be secured using a hexagon socket head screw (M 12 x 150 mm).

All profiles have soft, rounded edges for maximum comfort. The design load of the barrier is 4,5 kN/m<sup>1</sup>.

The crowd barrier folds flat after use and can be stacked in dollies for easy transportation and storage.

Apart from the standard 1 m sections, the Barrier can be delivered featuring several corner types, with extended platform sections, and in a Snake Gate version.

Furthermore, Prolyte can deliver the barrier featuring your own logo upon request.

### System applications

The Prolyte Barrier was developed for use as a safety device to control crowds in various types of occasions ranging from pop concerts to outdoor events. The crowd barrier offers a combination of optimum safety and comfort for the audience and a safe working area for rescue personnel.

The crowd barrier is designed as a demountable structure; setup and assembly are quick and easy, requiring a minimum amount of tooling.

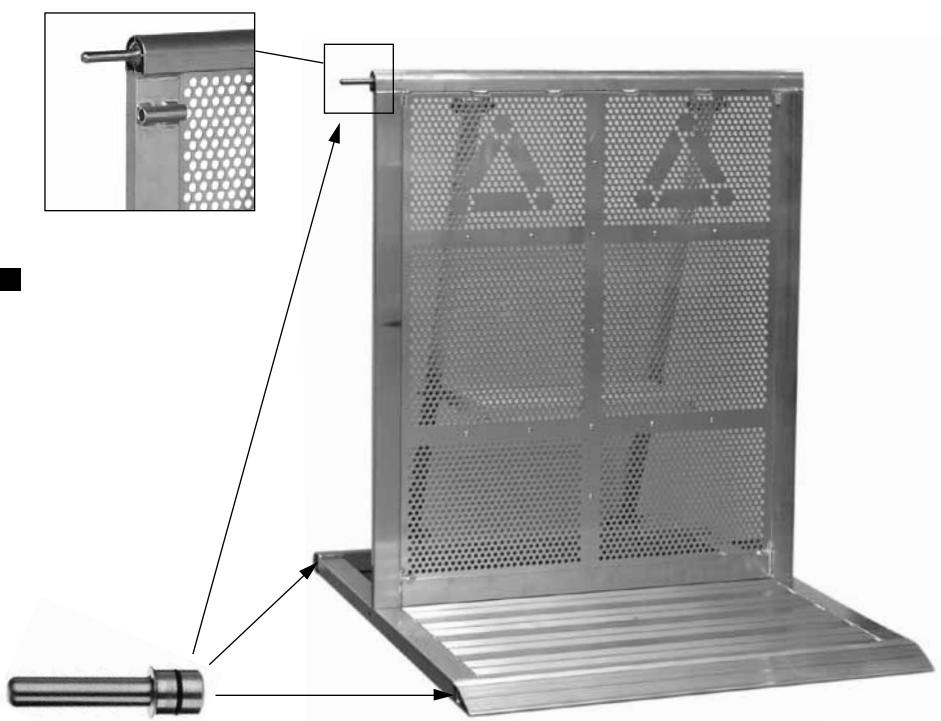

### Crowd safety

The crowd barrier was designed in accordance with strict design criteria and complies with all health and safety regulations such as; "Temporary Demountable Structures", "Technical Standards for Places of Entertainment", DIN 4113 and BS 8118.

## FLEX CORNER

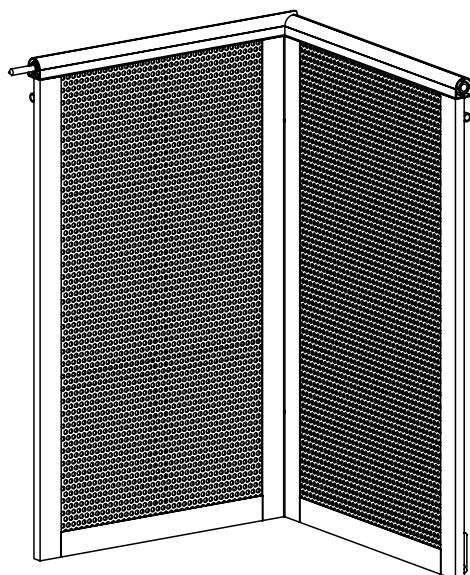

BAR -11-002

BAR -11-003

The Prolyte Barrier range is extended by the flex corner. In terms of angle, this corner can vary from 90-270 degrees and fits seamlessly with the standard Prolyte Barrier. The flex corner is equipped with a robust heavy-duty hinge which is capable of absorbing all the forces to which the barrier may be subjected.

The flex corner can be used as an inside as well as an outside corner. Prolyte has designed 2 inlay plates for a 90-degree and a 135-degree set up, respectively. Other inlay plates can be manufactured on request. The flex corner can be used without the inlay plate.

BAR -11-001

BAR -11-001

Prolyte has designed a 2-step extension for the barrier which can be used to create either a step-up possibility or a complete walking platform for security personnel.

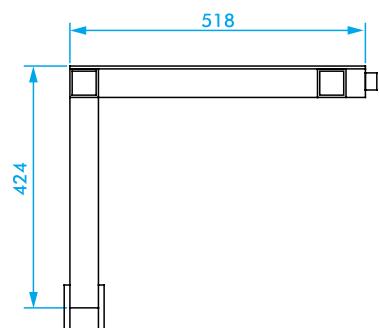

This extension provides enhanced safety as well as better reach and possibilities to address with respect to the public behind the crowd barrier.

## DOLLY

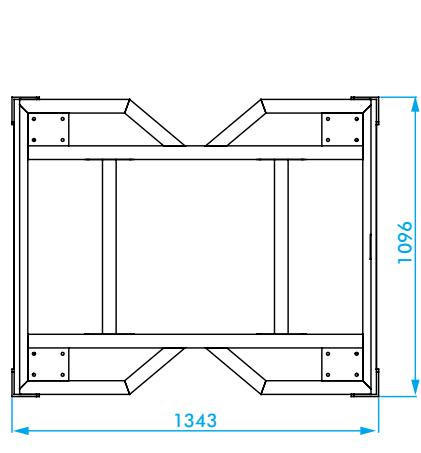

The specially designed barrier dolly makes transporting the barriers easy. This robust steel dolly holds 10 standard 1 m barrier sections.

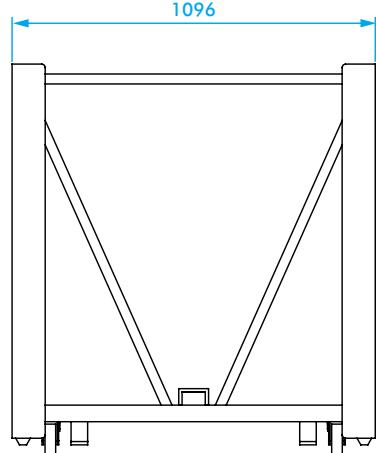

Just load the Prolyte barriers on top of each other onto the dolly. A set of 4 sturdy castor wheels makes transportation and the loading of the dolly easy. The dollies can be stacked onto each other for further space saving.

## SNAKE GATE

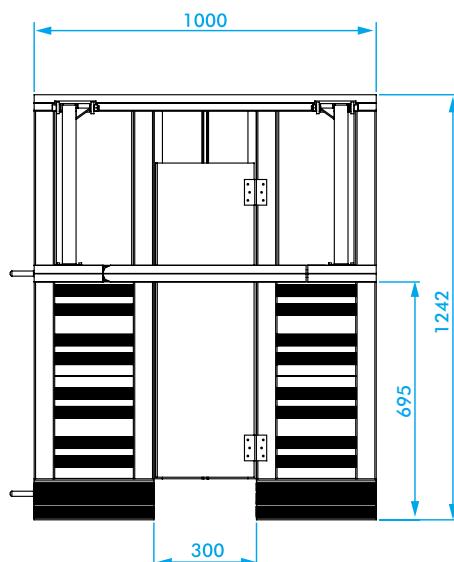

The Prolyte Snake Gate is a specially designed barrier to accommodate the transit of your cables ("snake") from the stage to front of house (FOH). A special gate, with a sturdy plate on top, protects your cables from sharp edges and

facilitates the placing of the barriers once the cables are already in place. The integrated door facilitates access from stage to FOH for working technicians or security personnel.
