

# XONE 1D MIDI Controller

The Xone:1D is a dedicated MIDI controller connected and powered by USB, which can be used to control DJ software such as Ableton Live and Traktor3.

It can be used with any brand or style of DJ mixer to add digital control, or add the 1D and a Xone:2D to a favourite mixer to make up the equivalent to a Xone:3D!

As well as the USB connection, the Xone:1D has 5-pin DIN MIDI sockets for connection to other MIDI-enabled devices, such as samplers, sequencers or recorders.

In the same way as the acclaimed Xone:3D mixer/controller works, all the MIDI controls can be mapped to software for use as navigation controls, providing the user with the same tactile control of performance software.

## FEATURE LIST

### MIDI Controller

- 43 MIDI messages
- USB and MIDI connections
- 4 x 60mm linear faders
- 8 detented rotary pots
- 20 push buttons - 4 illuminated
