

The Apart T150 is a toroidal transformer that can be used to transform 4 Ohm or 8 Ohm signals into 100 Volt signals.

By using the T150 you can:

- * Change a big 8 ohm or 4 Ohm loudspeaker into a powerfull 100 Volts loudspeaker.
- * Transform the loudspeaker output of a standard low impedanced amplifier into a 100 Volt output with a maximum power of 150 Watts, so that you can connect several 100 Volt loudspeakers in parallel.

The T150 has several power tapings from 30 up to 150 Watts.

TECHNICAL SPECIFICATIONS

Input	Black (C)+ Brown cable: 4 Ohm Black (C) + Red cable: 8 Ohm
Output	100 Volts
Transformer power tapings	Black: Common Brown: 150 Watts Red: 120 Watts Orange: 90 Watts Yellow: 60 Watts Green: 30 Watts
Dimensions (Dia x H)	98 x 54 mm
Weight	1.78 Kg
