

M1

Multimedia amplifier

M1 front

M1 rear

M1

The M1 Multimedia amplifier is a truly polyvalent "all-in-one" multizone amplifier. The possibilities are almost endless, thanks to the flexible but logical concept combined with several digital options, such as the web based control feature.

The M1 is suitable for installation in different types of situations like restaurants, clubs, bars, theaters, conference rooms, houses of worship, etc. With the M1 you can route up to 10 input channels to 4 different Zone outputs.

It can handle balanced microphone signals or stereo line signals on channels 1 to 6, and stereo line signals on channels 7 to 10.

The routing can be set into 2 operation modes. When set into switch mode, only 1 channel at a time can be routed to the selected zone.

When set into mix mode, all 7 channels can be routed to the selected zone simultaneously. This offers you the possibility to use the amplifier as a Mic/Line mixer for DJ or conference purposes.

A simple example : When installed in a restaurant with 4 separate rooms, it is possible to play popular music in the bar, cocktail music in the lounge, jazz in the hall and classical music in the dining room, assuming that there are 4 different sources selectable, and the volume in each room can be controlled separately.

The M1 is built as a 19" rack type device for mounting in a 19" rack. This makes the M1 the best choice in various applications.

The M1 is available in 2 versions : as "M1" including 2 x 150 W @ 4 Ohm stereo amplification for zone 1 and 2 or as "M1-Light" without amplification.

FEATURES :

Polyvalent

Flexible + several digital options

No extra software is needed

APPLICATIONS :

The M1 is perfect for use in commercial applications such as clubs, hotels, theatres, ...

WP 18

Wall panel controller 8 zones
