

Overview

The BOB-32 Breakout-Box is the ideal solution for interconnecting multichannel XLRs and D-sub. The box connects 2 x 8 XLR connectors with two 25-pin Sub-D connectors. So the BOB-32 is the perfect partner for a HDSP(e) AES-32. All 16 XLR connectors can be connected to the 19" rackmount unit, instead behind the slot field DAW. BOB-32 is pin compatible to the TASCAM (=RME) and Yamaha formats.

Flip-Frame

The BOB-32 allows, to change rackbrackets and handles from front to rear and thus change XLR or SUB-D also from front to rear. This way a BOB will perfectly fit in every rack and working situation.

A revolutionary new is the option, to simply fold the case in the middle and arrange both sides, front and rear, with all connectors on front or rear in two height units in the rack (see pictures).

Connectivity

- 8 x XLR Output
- 8 x XLR Input
- 2 x Sub-D 25-Pin connectors

Features

- 19" Flip-Frame
- Yamaha-/Tascam pin-out formats
