

Software lighting control manufacturer Visual Productions presents Cuelux™; its latest innovation that offers the entertainment lighting industry a software controller incorporating a range of exciting and new features.

Cuelux is an entry-level DMX lighting controller for intelligent lights, LED, dimmers, lasers and various other effects. The programme is platform-independent and available on Mac OS X and Microsoft Windows. The software is shipped with a USB-to-DMX adapter cable, compliant with the new DMX512-A standard.

Key to the design of Cuelux is its intuitive graphical user-interface. It is specifically designed to reduce the amount of time required to learn how to operate the software. Combined with its affordable price, Cuelux is available to a large audience of Light Jockeys, DJ's, free-lance technicians, rental companies and tour bands.

Great care has been taken to design Cuelux' 100% touch-screen compliant user-interface to reflect the functionality of the industry standard control boards. Programming the lights through Cuelux' cue-list system corresponds with the industry's most sophisticated consoles. Additional hands-on fader control is offered by a plug-and-play compatibility with MIDI control surfaces, including feedback to motorized faders where available.

A fresh and feature-rich design has made Cuelux the ideal controller for the start of any lighting career.

KEY FEATURES

Mac OS X + Windows Vista & XP

Industry standard cue-list system

Plug&Play MIDI Controller mapping

Ultra short learning curve

100% touch screen compatible

SPECIFICATIONS
