

**DATASHEET**

The Frontier is specially designed for fixed installations that require a standalone replay unit for pre-programmed lighting sequences. This allows venues like clubs, pubs and restaurants to operate their lights in an easy and user-friendly way, while preventing anyone from accidentally erasing any of the programmes.

The 19" rack mountable unit offers playback of 16 different sequences, programmable by VisualDMX. Additionally, the Frontier is fitted with a manual speed control dial. The illuminated buttons and its clear layout make the use of the device very ergonomic, particularly important in the expected low-lit environments.

In addition to its standalone capabilities, the Frontier also functions as a direct DMX Output for VisualDMX when used in live situations.

**Specifications**

- 16 memories
- 512 DMX channels
- 5-pin XLR DMX connector
- Typically 1600V rms (1 minute) data isolation
- Dimensions 482 x 152 x 44 mm (19 x 6 x 1.7 inches)
- Weights 1,8 kg (4 lbs)

**Minimal Requirements**

- Microsoft Windows Vista, XP or 2000
- USB 1.1 or 2.0 port
